

Action Chaining

An Action can invoke another Action (or more than one Action). It allows for building more granular and reusable designs.

In the image below, notice the following:

- ▶ The VIEWACTION Action calls the VIEWACTION2 Action
- ▶ The VIEWACTION2 Action calls the VIEWACTION3 Action
- ▶ The VIEWACTION3 Action calls the VIEWACTION4 Action

The screenshot displays the Delmia Apiso software interface. The 'Entity Explorer' on the left shows a hierarchy: SUB-PANEL > SUB-PANEL2 (View1) > VIEWACTION. The 'Project Manager' in the center shows 'Screen1 - REV.001.000' > SUB-PANEL2. The 'Properties' panel on the right is configured for 'VIEWACTION2'.

Enabled	Name	Type	On Action	Portal Action	Open Popup View	Next Action
☒	VIEWACTION	Button (Primary)				VIEWACTION2
☒	VIEWACTION2	Calculated				VIEWACTION3
☒	VIEWACTION3	Calculated				VIEWACTION4
☒	VIEWACTION4	Calculated				

The 'Local Screen Actions' table is empty.

The 'Properties' panel for 'VIEWACTION2' shows the following configuration:

- Name:** VIEWACTION2
- Show Title:** ☒
- Title:** [Empty field]
- Code:** [Empty field]
- Translation:** [Empty field]
- Tooltip:** [Empty field]
- Code:** [Empty field]
- Translation:** [Empty field]
- Defined:** ☒
- Type:** ☒ Button (Primary), ☐ Calculated, ☐ Tab, ☐ Button (Secondary), ☐ Numeric
- Image:** [Empty field]
- Group Tag:** [Empty field]
- On Action:** ☒ DFC, ☐ Action Script Function
- Name:** [Empty field]
- Revision:** [Empty field]
- Action:** [Empty field]
- Next Action:** VIEWACTION3
- Portal Action:** Go to Screen
- Name:** [Empty field]
- Revision:** [Empty field]
- Open Pop-up View:** [Empty field]
- Name:** [Empty field]
- Revision:** [Empty field]
- Availability mode:** Always
- Keyboard:** [Empty field]

Business Example

This image presents a typical business scenario:

The screenshot displays the Delmia Apiso software interface. The 'Entity Explorer' on the left shows a hierarchy: SUB-PANEL > SUB-PANEL2 (View2) > VALIDATE > SAVE. The 'Project Manager' in the center shows 'Screen2 - REV.001.000' > SUB-PANEL2. The 'Properties' panel on the right is configured for 'VALIDATE'.

Enabled	Name	Type	On Action	Portal Action	Open Popup View	Next Action
☒	VALIDATE	Button (Primary)				VALIDATE
☐	VALIDATE	Calculated				SAVE
☐	SAVE	Calculated				

The 'Local Screen Actions' table is empty.

The 'Properties' panel for 'VALIDATE' shows the following configuration:

- Name:** VALIDATE
- Show Title:** ☒
- Title:** [Empty field]
- Code:** [Empty field]
- Translation:** [Empty field]
- Tooltip:** [Empty field]
- Code:** [Empty field]
- Translation:** [Empty field]
- Type:** ☒ Button (Primary), ☐ Calculated, ☐ Tab, ☐ Button (Secondary), ☐ Numeric
- Image:** [Empty field]
- Group Tag:** [Empty field]
- On Action:** ☒ DFC, ☐ Action Script Function
- Name:** [Empty field]
- Revision:** [Empty field]
- Action:** [Empty field]
- Next Action:** VALIDATE
- Portal Action:** Go to Screen
- Name:** [Empty field]
- Revision:** [Empty field]
- Open Pop-up View:** [Empty field]
- Name:** [Empty field]
- Revision:** [Empty field]
- Availability mode:** Always
- Keyboard:** [Empty field]

In the image above:

- ▶ The OK Action is configured as a Button on the Screen, and the VALIDATE and SAVE Actions are calculated Actions that call DFCs
- ▶ After the user clicks the OK Button, the Action is executed and calls the VALIDATE Action, which checks that the data is correct
 - ▷ If it is, then it calls the SAVE Action, which persists the data
 - ▷ Otherwise, it displays an error on the Screen
- ▶ Action chains are limited to Actions used inside a Panel
 - ▷ If you need to use an Action defined in another View (e.g., a validation Step that conditionally requires an additional User Input), you can use the [On Action DFC/Action Script Function](#), which returns two Outputs: ActionView and Action
 - ▶ The processed Action and the subsequent Actions in the Action chain will then be taken from the View that was returned in the ActionView Output
 - ▶ ActionView can contain only the Views defined in the current Screen
 - ▶ For more information, see [Screen Flow Processing Diagram](#)
