

Action Script Revision Properties

Field	Description
Name	The unique name of the Action Script.
Revision	The Action Script revision number. This is a read-only field.
Default Revision	The revision of the Action Script that enables the Action Script to be used. ▶ Only default revisions of Action Scripts Functions that are in the Active, Prototype or Development in Progress status can be linked to the following entities: ▷ Screen "On Load" Property ▷ Screen "On Initialize" Property ▷ View Actions "On Action" Property ▷ View Forms "On Change" Property ▶ Only the function of the Action Script's default revisions can be used in other Action Scripts The Default Revision check box is selected by default for newly created Action Script revisions (the subsequent revisions of the Action Scripts will not be selected as default ones – you need to use the Entity Explorer Right-Click Menu).
Include all default Action Scripts in Test Run	If selected, the functions from other Action Scripts can be included while testing the Action Script. Only default revisions of Action Scripts that are in the Active, Prototype or Development in Progress status can be included.
Available Action Script Functions	This list contains all of the Action Script Functions available in the Action Script revision. For details, see Action Script Function Definition. You can double-click any of the Functions to locate it in the Code tab.
 (Show Function Usages)	Opens a window with the names of Screens and Views that use the selected Action Script Function. For more information, see How To Detect Usages of

	an Entity.
 (Generate Function Test Code)	Generates an initial code that is inserted into the Tests Tab. Each revision of the Action Script has its own test code.
