

Action Script Workspace

The main space for managing Action Scripts is divided into three sections:

- 1. The **Entity Explorer** tool pane contains a list of all Action Scripts unassigned to any specific Project.

Choose a Project from the **Select a Project** drop-down menu to display Action Scripts associated with this Project. To learn more about Projects, see [Projects Overview](#).

You can perform different actions on specific elements using the **Entity Explorer Right-Click Menu** (e.g., change the way the structure is displayed).

Node Type Parent	Possible Node Type Child	Description
Action Scripts root element	Action Script categories, Action Scripts	An Action Script root element contains Action Script categories and Action Scripts.
Action Script Category	Action Script categories, Action Scripts	An Action Script Category contains Action Scripts with their revisions or another Action Script Category.

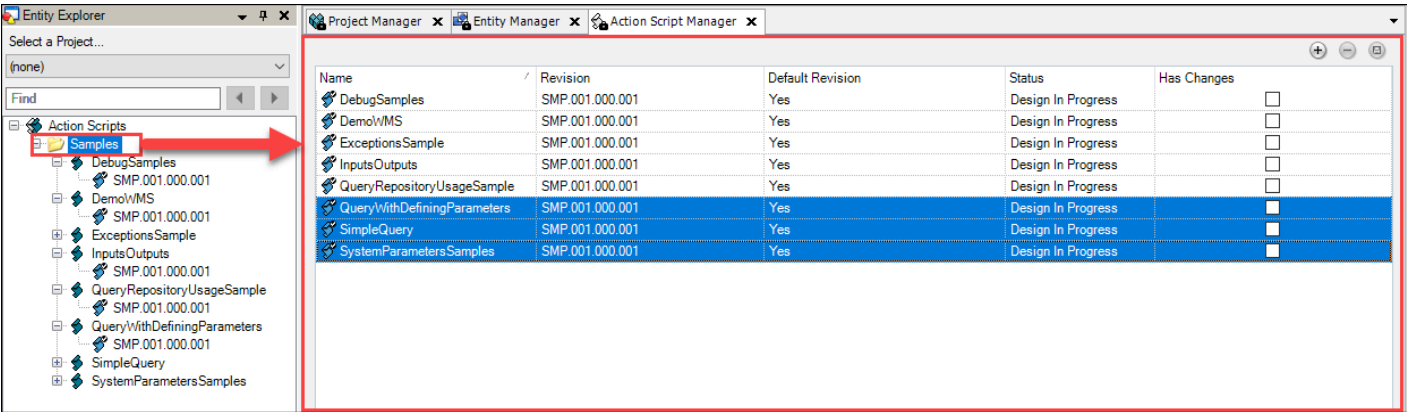

Action Script	Action Script revisions	An Action Script contains Action Script revisions (Action Scripts are grouped by name). Under an Action Script name, you can find its revisions (only one is set as default).
---------------	-------------------------	---

The list of Action Scripts can be expanded and collapsed by clicking the / icons next to an item. When you click an Action Script revision, its properties are displayed in the [Action Script Revision Properties](#) tool pane.

- 2. The **Action Script Manager** section is divided into two tabs: **Code** (for the main code of the script) and **Tests** (for script testing purposes).
- 3. The [Action Script Revision Properties](#) tool pane appears after clicking an Action Script revision element in the **Entity Explorer** tool pane.

Action Script Category View

When an Action Script Category is selected in the **Entity Explorer**, a general overview of individual scripts included in this category will be displayed in the middle pane. In this view, you can perform specific actions on multiple Action Script revisions. To do this, select one or more revision and choose an action from the [Entity Explorer Right-Click Menu](#) (e.g., change their status).

The following actions are also available in the Action Script Category View:

Icon	Action Type	Description
	Add	Adds a new Action Script to the selected category. The Create Action Script dialog box will appear, where you can provide the new Action Script details (name and revision).
	Remove	Deletes the selected revision. Only a revision in the Canceled status can be removed.
	Save	Saves changes made in a selected revision. Note that revisions which have been modified have the Has Changes box selected.
