

Action Script: Entity Explorer Right-Click Menu

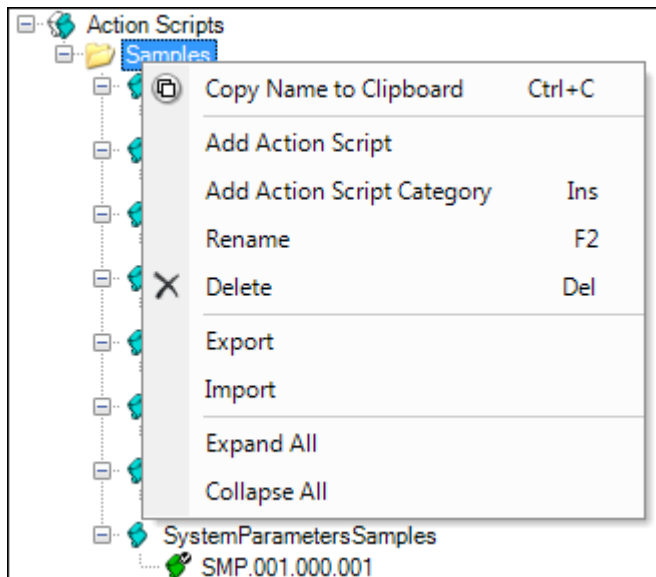

This menu can be accessed by using the context menu key on the keyboard or by right-clicking the entity.

Action Scripts Root Element

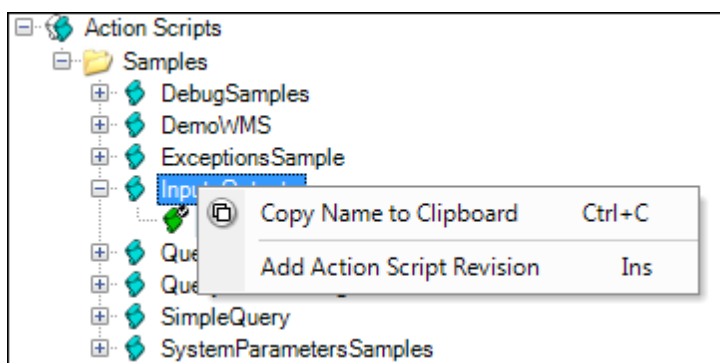

Command	Description
Add Action Script	Adds a new Action Script. The Create Action Script dialog box will appear, where you can provide the new Action Script details (name and revision).
Add Action Script Category	Adds an Action Script Category to the selected Action Scripts root element.
Save All Action Scripts	Saves all the changed Action Scripts.
Validate All Default Revisions	Validates all the Action Scripts revisions that are set as defaults. The Action Script code correctness and compilation are validated. In case of failure, the results of the validation are displayed.
Validate All Specific Revisions	Validates all the Action Scripts of the specific revision selected from the Validate Specific Revisions dialog box (which appears after selecting the right-click menu option). The Action Script code correctness and compilation are validated. In case of failure, the results of the validation are displayed.
Export	Exports the selected Action Script revisions to the separate files (for details, see Export/Import an Action Script).
Import	Imports the selected Action Scripts from the folder outside of Process Builder to the Action Script root element (for details, see Export/Import an Action Script).
Expand All	Expands the list of entities for the Action Scripts root element.
Collapse All	Collapses the list of entities for the Action Scripts root element.
Refresh	Refreshes the view.

Action Script Category

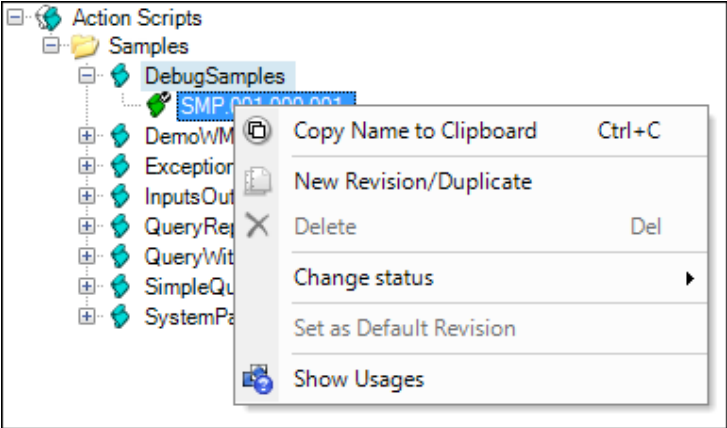

Command	Description
Copy Name to Clipboard	Copies the selected Action Script Category's name to the clipboard.
Add Action Script	Adds a new Action Script to the selected category. The Create Action Script dialog box will appear, where you can provide the new Action Script details (name and revision).
Add Action Script Category	Adds an Action Script Category to the selected Action Script Category.
Rename	Changes the entity's name.
Delete	Deletes the selected Action Script Category. Only an Action Script Category (with no Action Scripts) that is empty can be removed.
Export	Exports the selected Action Script revisions (only the revisions from the selected Action Script Category are available to be exported) to separate files. For details, see Export/Import an Action Script .
Import	Imports the selected Action Scripts from the folder outside of Process Builder to the selected Action Script Category (for details, see Export/Import an Action Script).
Expand All	Expands the list of entities for the selected Action Script Category.
Collapse All	Collapses the list of entities for the selected Action Script Category.

Action Script

Command	Description
Copy Name to Clipboard	Copies the selected Action Script name.
Add Action Script Revision	Opens the Create Action Script dialog box where you can enter the new Action Script revision.

Action Script Revision

Command	Description
Copy Name to Clipboard	Copies the selected Action Script revision with the Action Script name (<Action Script name> - <revision name>, e.g., APR_PB_SCREEN_VALIDATION - REV.001.000).
New Revision/Duplicate	Creates a copy of the selected Action Script with a different revision or a different name (depending on the duplication options choice).
Delete	Deletes the selected revision. Only a revision in the Cancelled status can be removed.
Change status	Changes the entity status (for more information, see Entity Status Types).
Set as Default Revision	Sets the selected Action Script revision as the default. The default revision icon has an overlay indicator in the upper-right corner (📌).
Show Usages	Opens a window with the names of Screens , Views , or GPM Projects that use the selected Action Script (for more information, see How To Detect Usages of an Entity).
