

Add a User Control

User Controls which can be added to Layout Editor from the [Toolbox](#):

- ▶ [Layout Controls](#) (Grid (Deprecated) and Sub-DFC)
- ▶ [Input Controls](#) (see [User Interface Controls for Function Input](#))
- ▶ [Output Controls](#) (see [User Interface Controls for Function Output](#))
- ▶ [Standard and Functional Business Controls](#) (see [Business Controls](#))

To Add a User Control to the Design Surface

Use one of the following options:

- ▶ Drag-and-drop the chosen User Control type from the [Toolbox](#) (see [Available Elements in Layout Editor](#)) onto the design surface
- ▶ When the User Control is not a grid, the system adds an appropriate Input or Output to dedicated Functions:
- ▶ For Inputs, the system creates the GetInputs Function (this Function is marked by the color yellow, and it is not possible to change the type of this Function)
- ▶ For Outputs, the SetOutputs Function is added (this Function is marked by the color yellow, and it is not possible to change the type of this Function)
- ▶ When a Business Control or Sub-DFC is added, the system creates a new Business Control Function or Sub-DFC Function within the Step

The user is able to add grids, Sub-DFCs and Business Controls in the same way as User Controls.

The name of a Sub-DFC and its revision is shown in the Layout Editor.
