

Change a Routing Value

1. Right-click on the connector line containing the Routing Value that you want to modify, and choose **Change Routing Value** from the [Right-Click Menu](#).
2. A dialog box to edit the value and the description will be displayed.
3. Enter the new Routing Value, and click **OK** to confirm the change.

The type of value entered must match the Routing Output type.

Only one default Output can be set from a Step. If the user tries to set two, an error message will be displayed, and a choice between the two defaults will have to be made.

When a connector line is deleted, the Routing Value is deleted as well.
