

Controls Tags Overview

Controls Tags are not supported in the HTML View.

To Add Controls to the HTML Tab (User Inputs, User Outputs, Sub-DFC Functions, or Business Controls)

Use one of the following options:

- ▶ Add a Control on the Function Navigation Editor
- ▶ Drag a Control to the HTML Layout Editor
- ▶ Enter an appropriate HTML code in the HTML tab

It is also possible to add a Step Grid.

Adding Controls on the HTML Layout Editor

Type of Control Added manually	HTML Tag	Effect on Function Navigation
Input	<code><div data-flx-input="FunctionName.InputName"/></code>	A User Input (optionally a Function if one does not exist) is created.
Output	<code><div data-flx-output="FunctionName.OutputName"/></code>	User Routing (optionally a Function and Output if it does not exist) is created.
Step Grid	<code><div data-flx-stepgrid="4a28015b-8734-2uas1234455jd9"/></code>	Step Grid Control is created.
Sub-DFC	<code><div data-flx-subdfc="Call_Sub-DFC"/></code>	Sub-DFC Function without linked DFC is created.
Business Control	<code><div data-flx-bc="BusinessControlFunctionName"/></code>	Business Control Function is created.

Removing Controls on the HTML Layout Editor

Type of Control Removed manually	Effect on Function Navigation
Input	Input Source is changed to Constant.
Output	Output Routing is removed.
Step Grid	Step Grid is removed.
Sub-DFC	No action, validation fails.
Business Control	No action, validation fails.

The Step Grid Control in the HTML Layout Editor should be used only for conversion from Layout Editor. Its use for other purposes is not recommended.
