

DAL Query Function

To Add the DAL Query Function

1. Drag the DAL Query Function from the [Toolbox](#) to the Function Navigation diagram, or double-click the DAL Query icon in the Toolbox.
2. The system displays a complete list of DAL methods which the user is able to choose from. When the user enters a part of the DAL class or method, the browser suggests a list of matching entries from the database.

3. After the selection of the DAL method, the system adds Inputs to the Function based on the Inputs of the method.
4. The user can choose which method's Outputs will be bound to the Function Outputs. The user can select and deselect all Outputs for binding in the Function's Properties Pane.

Properties

General

Name

ArchiveConstraint_SelectByFKColumnName

Description

Type

DAL Query

☐ Log Events

AssemblyName

FlexNet.DataServices.DBSchema

Class Name

IArchiveConstraint

Method Name

SelectByFKColumnNameFromTable(String ParentTableName) : Archiv
