

Detect the Usages of an Entity

The **Show Usages** option works only for the following entities:

- ▶ Processes
- ▶ Operations
- ▶ DFCs
- ▶ Screens
- ▶ Layouts
- ▶ Views
- ▶ Action scripts

To Open the Usages Pop-Up Window

- ▶ Select an entity from the [Entity Manager](#), [Entity Explorer](#) or [Project Entity Manager](#) and use one of the following options:
 - ▶ Select the **Show Usages** option from the [Main Menu](#).
 - ▶ Click  (Show Usages) on the [Toolbar](#).
- ▶ Right-click an entity in the [Entity Manager](#), [Entity Explorer](#) (available only for action script revisions), or [Project Entity Manager](#), and choose **Show Usages**.

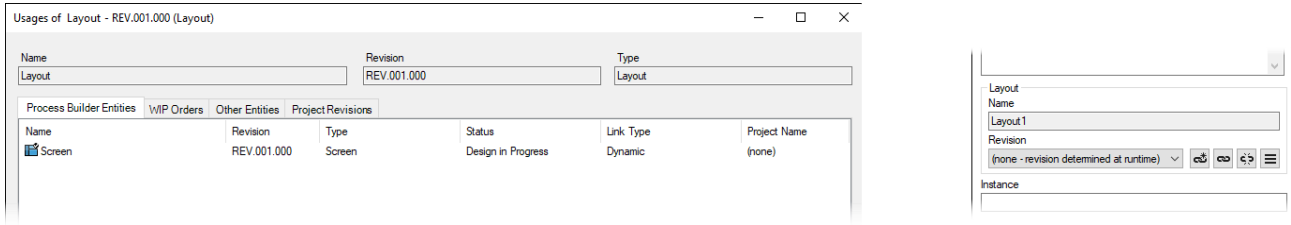

Results of the usages detection are available on the following tabs:

- ▶ **Process Builder Entities** – displays operations, processes, DFCs, screens, layouts, and views. Entities from other revisions of the same project or referenced projects are also visible. For example, when two screens that are located in different (but referenced) projects use the same layout, both screens are displayed.
- ▶ **WIP Orders** – displays [WIP orders](#).
- ▶ **Other Entities** – displays count procedures, determinations, EMRs, FlexParts, GPM projects (GPM projects or PB projects in which the checked entity revision is the default), job actions, KPI terms, maintenance procedures, maintenance template procedures, MI actions, recipes, and UOM codes.
- ▶ **Project Revisions** – displays project revisions in which the entity is located.

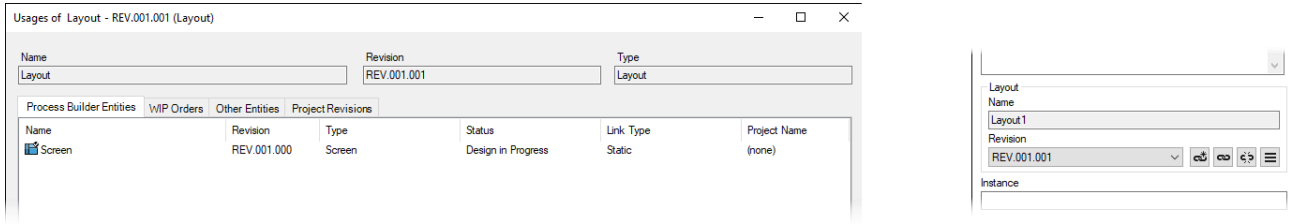

Link Types

A link between an entity that is used by another entity can be:

- ▶ **Dynamic** – no specific revision links the entities – the default revision is determined in runtime. For example, if there are several layout revisions, and the **Show Usages** option used on any of them indicates a dynamic link to a screen, the **(none - revision determined at runtime)** option was selected on the screen properties.

- ▶ **Static** – the entities are linked by a specific revision that is also used in runtime. For example, if there are several layout revisions, and the **Show Usages** option used on a specific layout revision indicates a static link to a screen, this revision was selected on the screen properties. The window will not list the screen if you detect usage on the remaining layout revisions.

Usages Tabs Availability

Entity Type	Process Builder Entities Tab	WIP Orders Tab	Other Entities Tab	Project Revisions Tab
Process	✗	✓	✓	✓
Operation	✓	✓	✓	✓
DFC	✓	✗	✓	✓
Screen, view, layout	✓	✗	✓	✓
Action script	✓	✗	✓	✗

Copying Usages Details

Options	
Copy usages to clipboard	Copies all usages of an entity with a type, name, revision, status, and link type (dynamic or static). The default revision of an action script that is in the prototype, development in progress or active status is considered as the static link type.
Copy URI right-click menu option	Copies the URI (Uniform Resource Identifier). Available only for the Other Entities tab.
