

Duplicate an Entity

You can duplicate an entity to a [new revision](#) or a [new entity](#). The status of a new revision or new entity is set to design in progress. For more information on entity duplication in Process Builder projects, refer to [Duplicate a Project](#).

When creating a new DFC revision or a new DFC, the links to literals are also copied.

To Create a New Revision

In the case of projects, you can add a new entity revision only to the [module](#) of the source entity.

1. Select one or more entities in [Entity Manager](#) or [Project Entity Manager](#).
2. Use one of the following options:
 - ▶ Click  (New Revision/Duplicate) on the [toolbar](#).
 - ▶ Select the **New Revision/Duplicate** option from the [right-click menu](#).
3. In the dialog box that the system displays, select **New entity revision**.

Help

Field	Description
Entity name	This field is read-only.
Entity revision	The revision of the new entity.
Set as default revision	If selected, the newly created entity revision is set as default.
Use the embedded version of the Layout	Available only for active or cancelled screens. You can: ▶ Select the check box – remove the link and keep the embedded version of a Layout as it is in the source screen. ▶ Do not select the check box – refresh the embedded Layout with the latest version of a linked layout and keep the link. For a complete explanation of the check box possible states click here.
Change Order	Available only for processes and operations. If the entity revision is

	affected by a change order (CO), the CO list is activated. It enables deciding if the newly created entity revision is a response to the CO. For more information, refer to Change Management Help .
Open entity after creation	If selected, the workspace of the created entity revision opens automatically.

A proper note is added to the process or operation properties [History Tab](#), although it only appears if one of these keys in the Central Configuration file is set to "true": RequireSignOffOnRelease, ShowNoteOnStatusChange, OR ShowNoteOnSave (for details, see [Central Configuration Documentation](#)).

Electronic signatures (if any) will be copied to the new revision.

Notes are available only for processes and operations.

To Create a New Entity

1. Select the entity in [Entity Manager](#) or [Project Entity Manager](#).
2. Use one of the following options:
 - ▷ Click  (New Revision/Duplicate) on the [toolbar](#).
 - ▷ Select the **New Revision/Duplicate** option from the [right-click menu](#).
3. In the dialog box that the system displays, select **New Entity**.

Field	Description
Entity name	The name of the new entity.
Entity revision	The revision of the new entity.
Set as default revision	The newly created entity is automatically set as default revision.
Use the embedded version of the Layout	Available only for active or cancelled screens. You can: ▶ Select the check box – remove the link and keep the embedded version of a Layout as it is in the source screen. ▶ Do not select the check box – refresh the embedded Layout with the latest version of a linked layout and keep the link. For a complete explanation of the check box possible states click here.
Project revision	Enables selecting the project revision in which you want to locate the new entity. When the revision is set to (none) , the duplicated entity is added to Entity Manager. Not available for processes and operations.
Project module	Enables selecting the Module in the chosen project revision in which you want to locate the new entity. Not available for processes and operations.
Change Order	Available only for processes and operations. If the entity revision is affected by a change order (CO), the CO list is activated. It enables deciding if the newly created entity revision is a response to the CO. For

	more information, refer to <i>Change Management Help</i> .
Open entity after creation	If selected, the workspace of the created entity revision opens automatically.
