

Entity Explorer

Entity Explorer displays an entity structure and dependencies in the form of a tree. You can expand or collapse the list by clicking the  /  icon next to an item. When you click an entity or its child elements, the properties are displayed in the **Properties** tool pane.

You can modify the status of entities and change the tree structure using the **right-click menu**.

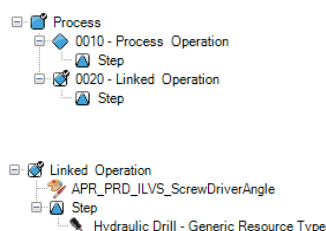

To Select an Entity in the Entity Explorer

1. Left-click the node.
2. The corresponding node on the diagram (for DFCs) will become highlighted and tool panes and entity workspaces will be populated.

You can use **Backspace** to navigate (items are highlighted going up in Entity Explorer) and **Enter** to open the selected view.

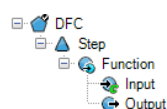

Parent/Child Relationships in the Entity Structure

Process and Operation

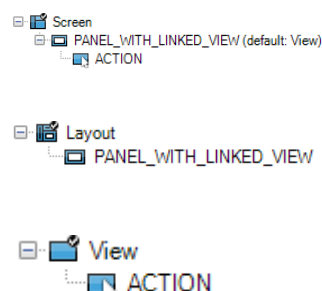

Processes contain process operations

DFC

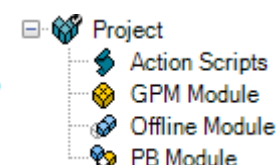

DFCs have steps as child nodes. Steps

Screen, Layout, and View

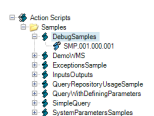

Screens are composed of a linked

Project

Projects consist of modules that serve

Action Script

The list of action

and linked stand-alone operations. Steps are the child nodes of process operations and operations.

Operations consist of steps. [Links](#) and [task permissions](#) can be added to operations and their steps.

contain one or more functions, and functions consist of inputs and outputs.

layout, which includes panels to which you link views. Views contain actions that are designed to display various information.

as a container for other entities.

scripts depends on whether they are assigned to a project or not. The child nodes of action scripts are their revisions.

Entity Explorer Right-Click Menu

Right-click options differ depending on the entity. The options are available for:

- ▶ Processes
- ▶ Process operations
- ▶ Operations
- ▶ Operation steps
- ▶ Links and task permissions
- ▶ DFCs
- ▶ DFC steps
- ▶ Functions
- ▶ Inputs and outputs
- ▶ Screens
- ▶ Layouts
- ▶ Views
- ▶ Projects
- ▶ Action scripts
