

Entity Workspace

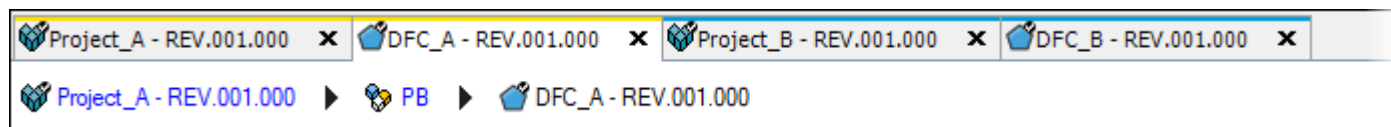

This is the main window where entities are displayed in the various view modes. Opened projects or entities are displayed in a tabbed workspace with **tool panes** on both sides of the screen – you can show or hide them using the **View** menu.

Workspace Tabs

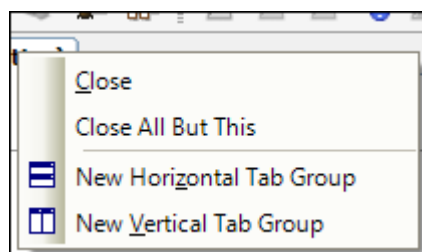

When you have more than one entity opened, the tabs enable easier navigation between entities. You can change the tab order by dragging the tab left or right. Use **CTRL+TAB** to switch between tool panes or tabs.

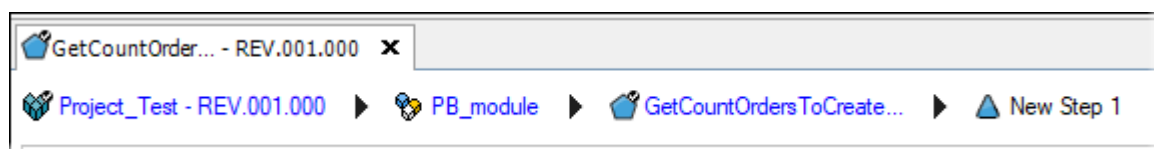

When you open DFCs, screens, views, or layouts from different project revisions, those entities and the project revision in which they are located are marked with the same color:

You can group tabs vertically or horizontally by right-clicking a tab and selecting an appropriate option from the menu:

Breadcrumbs let you navigate between different levels of entities:

View Modes

Process Builder offers distinct entity views with features for functional and technical engineers.

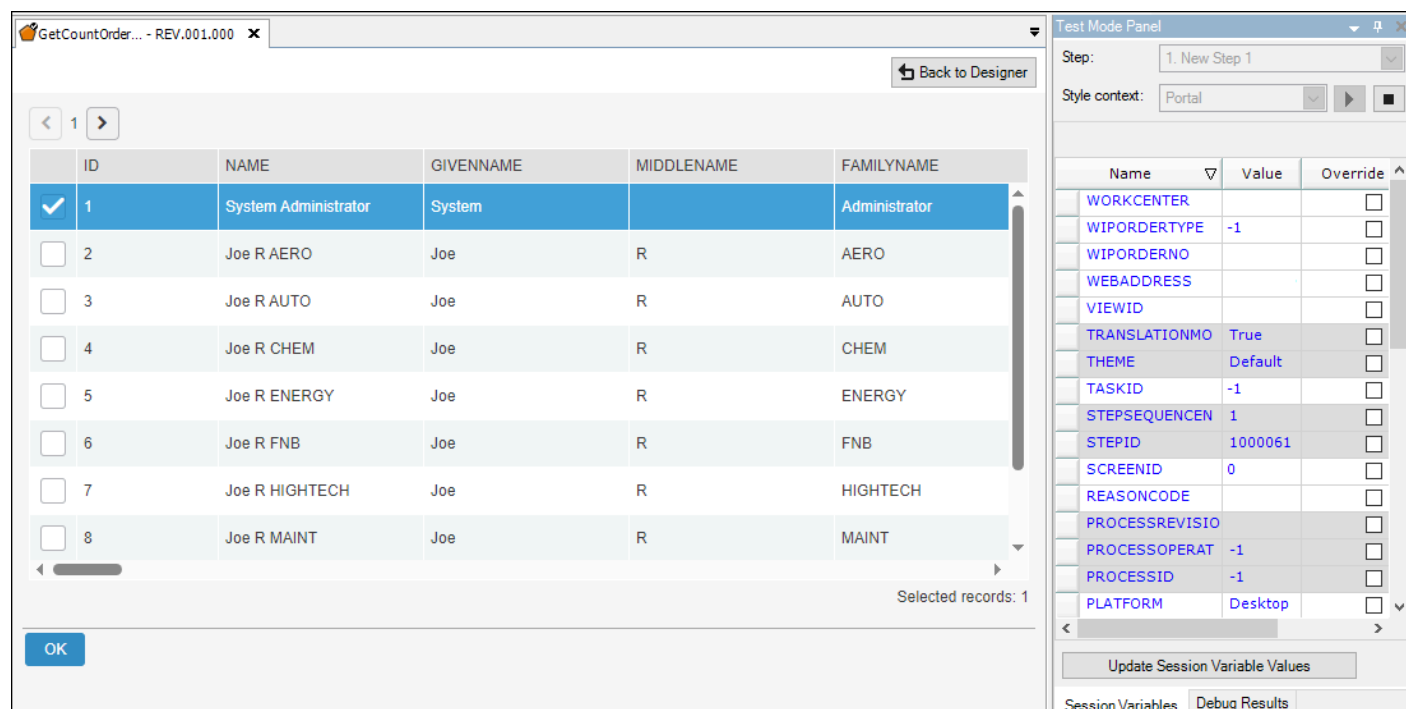

Designer Views

- Process
- Operation, Process Operation, and Operation Step
- DFC
- DFC Step
- Screen, Layout, and View

Action Script

Test Run

The **Test Run** view is available only for DFCs and screens. You can perform a test execution of a designed DFC or screen without exiting Process Builder.

Navigation Between Different Related Entities

In Entity Explorer (depending on the assigned role):

- ▶ Use **Backspace** to navigate (items are highlighted going up in Entity Explorer) and **Enter** to open the selected view mode.
- ▶ Double-click to open an entity or its component.
- ▶ In the **Sub-DFCs** tab view:
 - ▶ Double-click to open a sub-DFC (a default action can be set when a DFC is double-clicked in the Entity Explorer pane or on the **Advanced** tab of the **Options** dialog box).
 - ▶ Right-click the menu of the sub-DFC function type, and a DFC can be edited in a new tab or be displayed in the current one.

On diagrams (depending on the assigned role):

- ▶ Double-click to open an entity or its component.
- ▶ In the **Sub-DFCs** tab view:
 - ▶ Double-click a step to open the sub-DFC view.
 - ▶ In the sub-DFC view, right-click for menu options or double-click to open the DFC (a default action can be set when an DFC in this view is double-clicked on the **Advanced** tab of the **Options** dialog box).

If you are assigned the Process Technical Author role, the **Open** option is available on the sub-DFC function properties pane, displays the linked sub-DFC in a new tab.
