

Find an Entity

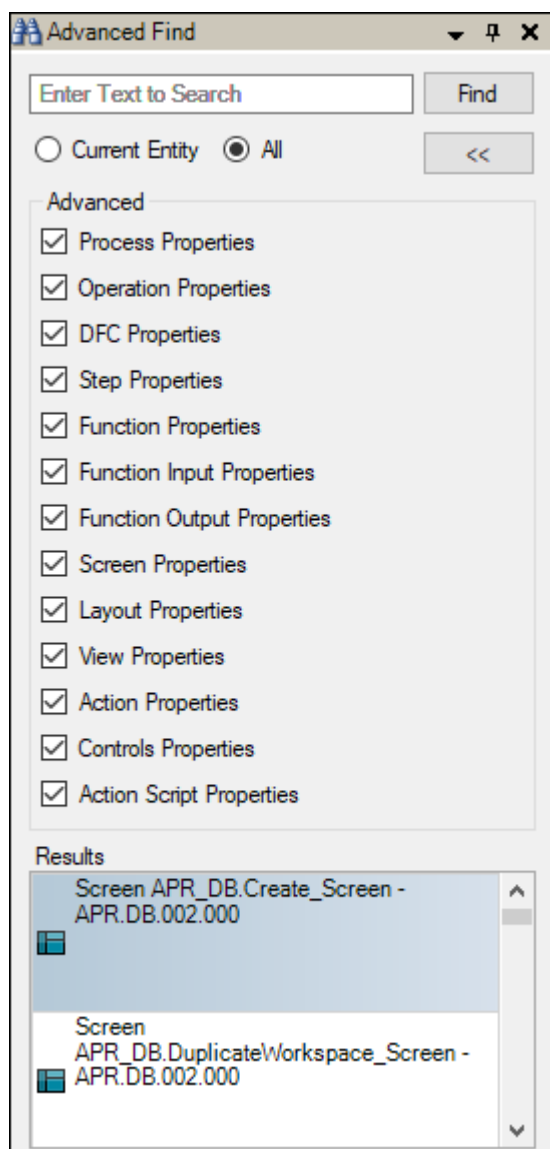

To Display Advanced Find Tool Pane

Use one of the following options:

- ▶ Press `Ctrl+F`.
- ▶ Click  (Advanced Find) on the toolbar.
- ▶ Choose **Advanced Find** from the **Edit** main menu.

To Use Advanced Find

Enter a text string into the search field and click **Find** or press `Enter`. You can choose to search only the selected entity or all of them. Use  and  to show or hide the advanced find options. The tool works only for entities with saved changes.

In the **Advanced** section, select the properties of entities or their components that you want to search. The tool searches for the text string in different fields depending on the selected check boxes.

Components	Searched fields
Process	Name, description, translation, code, and revision.
Operation	Name, description, translation, code, and revision.
DFC	Description, translation, code, revision, and properties.
Step	Name and description.
Function	Name, description, and other properties, for example SQL query.
Function Input	Name and description.
Function Output	Name and description.
Screen	Name, description, and panel name.
Layout	Name and description.
View	Name and description.
Action	Name. Works only for actions defined for a screen.
Controls	Name.
Action Scripts	Name and function names.

Advanced Find Results

The results appear as a list in the **Results** window. Double-clicking the selected result redirects you to the entity workspace, where the searched property is found, and highlights the component in **Entity Explorer**. In addition, double-clicking the function, input, or output of the selected DFC highlights them also in the function navigation diagram.
