

# Function Navigation Overview

The Function Navigation Editor can be opened by drilling down below the Step level using the double-click or **Enter** button:

- ▶ From the Step Flow diagram
- ▶ From the Entity Explorer – on Step, Functions, Inputs, or Outputs

It is possible to move between Functions or between a Function's Inputs or Outputs in Function Navigation using the arrows on the keyboard.

The Function Navigation diagram provides a graphic representation of the content of a Step.

- ▶ The Functions are presented as blocks with Inputs and Outputs on both sides
- ▶ Each Function type is marked with a different icon, and various types of Input sources and Output routing dispositions are indicated with different colors (see table below)

| Background Color | Input Source        | Output Routing Disposition |
|------------------|---------------------|----------------------------|
|                  | Constant            | -                          |
|                  | User                | User                       |
|                  | Machine             | Machine                    |
|                  | User External Input | External                   |
|                  | System Parameter    | -                          |
|                  | Session Variable    | Session                    |

- ▶ The list of data types and their processing modes are marked with additional icons
- ▶ Arrows between Inputs and Outputs determine the flow of the data
