

Function Navigation Right-Click Menu

Function Navigation Workspace

This can be accessed by using the context menu keyboard key or by right-clicking anywhere in the Function Navigation workspace.

Command	Description
Add Function	Adds a new function to the step. By default, the type of new function is Input to Output .
Set Routing Output	Enables setting a function output that will be used as an output routing of a DFC step.
Cut	Cuts (the first part of the Move action) the selected Function. The user can select more than one Function to be cut.
Copy	Copies the selected Function. The user can select more than one Function to be copied.
Paste	Pastes the Function from the clipboard. This is the second part of both the Cut and Copy commands.
Delete	Deletes the selected Function.
Autolayout	Automatically arranges all the items on the diagram.
Save As Image...	Saves the flow diagram as an image. An alternative method is to select entities and press Ctrl+C. The selected Functions will be copied to the clipboard as an image (which can be pasted into Microsoft Word or another application).
Properties	Gives focus to the Properties Tool Pane for the selected Step.

Function

	Add Input	Ctrl+Shift+I
	Add Output	Ctrl+Shift+O
	Add Pair	Ctrl+Shift+R
	Rename	F2
	Open Sub-DFC	
	Cut	Ctrl+X
	Copy	Ctrl+C
	Paste	Ctrl+V
	Delete	Del
	Save as Image...	F12
	Properties	F4

Command	Description
Add Input	Adds an input to the selected function.
Add Output	Adds an output to the selected function.
Add Pair	Adds an Input and Output (as a pair) which are mapped (this option is available only for the Input to Output Function).
Rename	Changes the name of the selected function.
Open Sub-DFC	Opens a DFC that is linked as a sub-DFC in a new tab. This option is available only for the Sub-DFC function type.
Cut	Cuts (the first part of the Move action) the selected Function. The user can select more than one Function to be cut.
Copy	Copies the selected Function. The user can select more than one Function to be copied.
Paste	Pastes the Function from the clipboard. This is the second part of both the Cut and Copy commands.
Delete	Deletes the selected Function.
Save As Image...	Saves the flow diagram as an image. An alternative method is to select entities and press Ctrl+C. The selected Functions will be copied to the clipboard as an image (which can be pasted into Microsoft Word or another application).
Properties	Gives focus to the Properties tool pane for the selected Function.

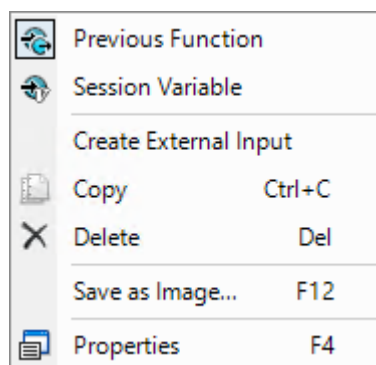

Input/Decomposition Group

Input

Command	Description
Create Decomposition Group	Creates a new entity in the Function diagram that allows the user to configure mapping between the properties of the Complex variable and the Function Inputs.
Constant	Changes the Input source to Constant. The option is not available for the Complex/List of Complex data types.
Machine	Changes the Input source to Machine.

Decomposition Group

	The option is not available for the Complex/List of Complex data types.
Previous Function	Changes the Input source to Previous Function.
Session Variable	Changes the Input source to Session Variable.
User	Changes the Input source to User. The option is not available for the Complex/List of Complex data types.
System Parameter	Changes the Input source to System Parameter. The option is not available for the Complex/List of Complex data types.
Create External Input	The Input will be exposed as an external Input of the DFC. External Inputs can be used to pass values to the DFC when using it as a sub-DFC or when invoking it from Machine Integrator/Job Scheduler/XML Manager. When the DFC Interface is disabled: ▶ This option is available only when the Input has the source of User. Its property is changed to Allow external Input. When this check box is selected, the External Input Name field is required. When the DFC Interface is enabled (recommended): ▶ External Input will be automatically created in the DFC Interface.
Rename	Changes the name of the Input.
Cut	Copies and Cuts the selected Input.
Copy	Copies the selected Input.
Paste	Pastes the Input.

Delete	Deletes the selected Input.
Save As Image...	Saves the flow diagram as an image.
Properties	Opens the Input Properties tool pane.

Output/Composition Group

Output

	Create Composition Group	
	Add Session Routing	
	Add Machine Routing	
	Add User Routing	
	Add External Routing	
	Rename	F2
	Cut	Ctrl+X
	Copy	Ctrl+C
	Paste	Ctrl+V
	Delete	Del
	Save as Image...	F12
	Properties	F4

Composition Group

	Add Session Routing	
	Add External Routing	
	Cut	Ctrl+X
	Copy	Ctrl+C
	Delete	Del
	Save as Image...	F12
	Properties	F4

Command	Description
Create Composition Group	Creates a new entity in the Function diagram that groups several Function Outputs into a single Complex Output.
Add Session Routing	Adds an Output routing disposition to Session Variable.
Add Machine Routing	Adds an Output routing disposition to Machine. The option is not available for the Complex/List of Complex data types.
Add User Routing	Adds an Output routing disposition to User. The option is not available for the Complex/List of Complex data types.
Add External Routing	Adds an Output routing disposition to External Output. Uses the External Output's name to match it with the external Output present in the DFC Interface. If an Output cannot be matched, a new external Output will be automatically created in the DFC Interface and linked.
Rename	Changes the name of the Output.
Cut	Copies and Cuts the selected Output.
Copy	Copies the selected Output.
Paste	Pastes the Output.
Delete	Deletes the selected Output.
Save As Image...	Saves the flow diagram as an image.

Properties	Opens the Output Properties tool pane.
------------	--

Output Routing

	Delete	Del
	Save as Image...	F12

Command	Description
Delete	Deletes the Output routing disposition.
Save As Image...	Saves the flow diagram as an image.
