

HTML View Type

This type of View consists of an **HTML Editor**, which is a simplified **HTML Layout Editor**, and an **Actions** tab.

The HTML View is best suited for client mode and Offline Screens.

This View does not have:

- ▶ linked View DFC
- ▶ Forms tab

HTML View Properties

Properties

General

HTML View Inputs

Name	Type	Default Value	Test Value
\$ScreenModel	Char		

HTML View Outputs

Name	Type	Auto Submit
------	------	-------------

Screen Literals

Code

ScreenName

Code: ScreenName

Device	Prompt
Desktop	Main
Mobile	Main
Text	Main

HTML View Inputs

This grid shows all the Inputs of the HTML View. The **Inputs** can be added in the grid by clicking  (Add), or by typing in the name of the Input in curly brackets, e.g., {Input1}.

The Inputs can only be deleted if they are not used in the **HTML** tab.

\$ScreenModel - this is an object that holds the context of the View/Screen in the JSON format. It is added to HTML View belonging to the Offline Module.

Default Value is not editable for the Inputs of the Complex/List of Complex data type.

HTML View Outputs

This grid shows all the Outputs of the HTML View. The [Outputs](#) can be added in the grid or in the HTML tab.

The Outputs can only be deleted if they are not used in the [HTML tab](#).

Screen Literals

This pane shows all the literals defined for the HTML View.

For more information, see [Screen Literals](#).

Mobile and Text platforms are no longer supported.
