

HTML View: HTML Tab

HTML tab allows creating user interface using HTML tags, special attributes, Inputs, Outputs, Screen Literals, Font Icons and Conditionals.

Adding Actions

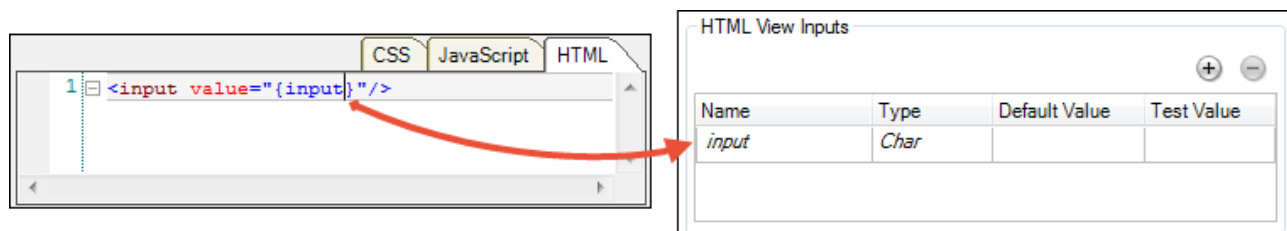

Actions defined for the View can only be added using **Action**, **Button** and **Tab** attributes in the HTML tab.

If an Action is disabled in the Entity Explorer, it should be removed from the HTML tab.

Adding Inputs

To add an Input:

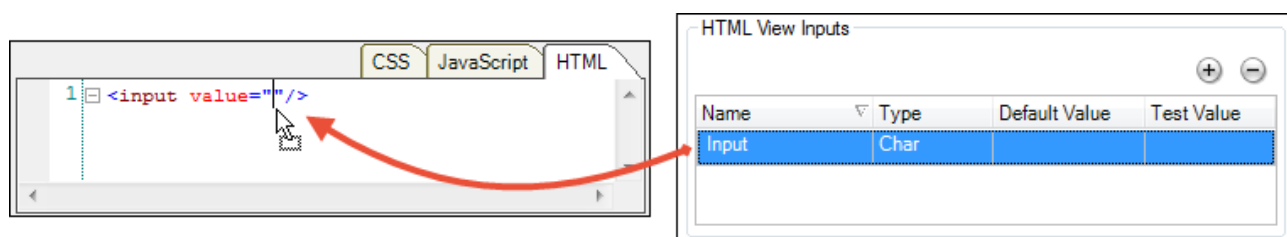

1. Type a valid name of the Input inside curly brackets, e.g., {input}
Input of the name "input" should be added to the **HTML View Inputs** grid.

2. Save changes to the HTML View.

or

1. Create an Input in the **HTML View Inputs** grid.
2. Drag the Input from the grid to the HTML tab.

Adding Web Components

To learn how to add Web Components, refer to [How to Use Web Components](#).

Data Binding

To learn how to use data binding, refer to [Data Binding](#).
