

HTML Tab

The HTML Layout provides the user with the ability to:

- ▶ Use the already defined CSS Classes in the client mode. For details, see the [CSS Framework Documentation](#).
- ▶ Design the layout of a screen using HTML, CSS and JavaScript, as it contains:
 - ▷ Standard Apriso controls: Business Controls, User Inputs and Outputs, Sub-DFCs, Step Grids ([Controls Tags Overview](#))
 - ▷ Special [attributes](#)
 - ▷ Any other HTML element
- ▶ Read and write values from and to Process Builder Inputs and Outputs (see [Screen Interface Input and Screen Interface Output](#))

HTML is compatible with the XHTML 1.1 standard.

To Enable CSS Class Suggestions

When inside an HTML class attribute, you can press **CTRL+SPACE** to enable CSS class suggestions (IntelliSense). For this functionality to work properly, however, the cursor must be inside the attribute's quotation marks.
