

Header View Type

View Runtime

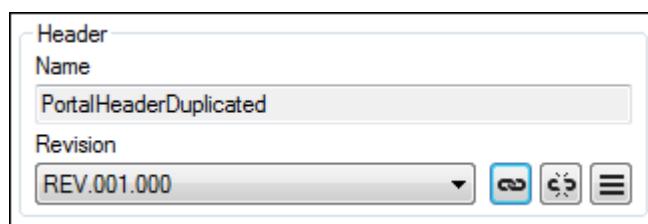

Functional Overview

View Type: Header

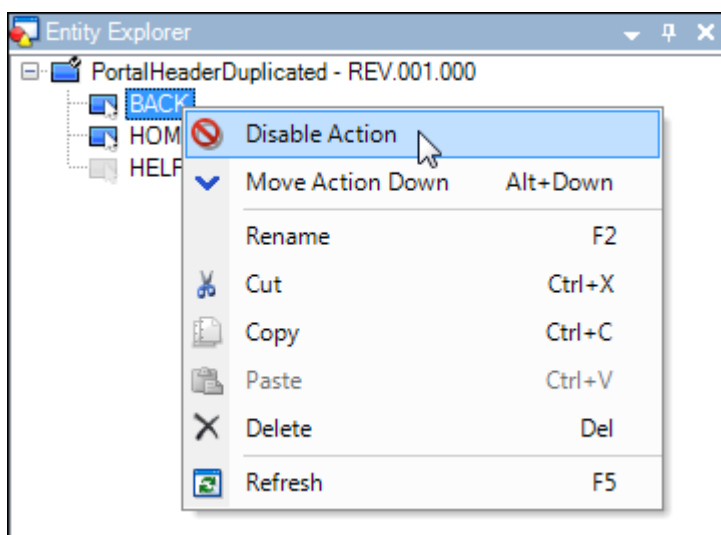

The Header does not need any DFC of the View type or any Business Controls.

Header Configuration

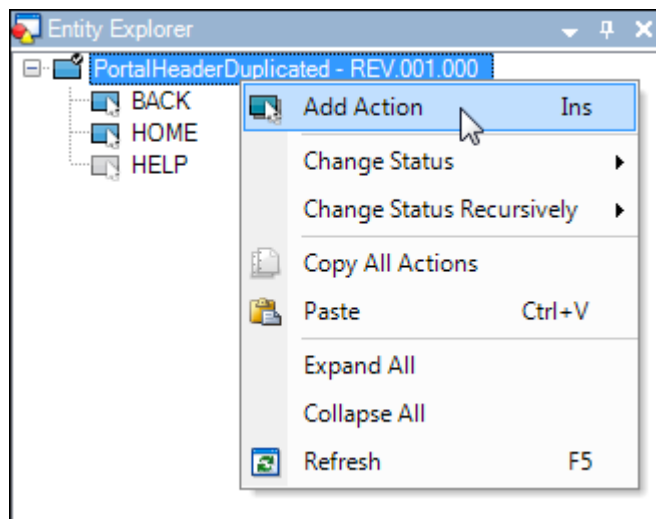

1. Duplicate a **PortalHeaderTemplate** and then link it to a Layout or Screen (via a copy and duplicate action). Use **Screen: General Tab** or **Layout: General Tab**.

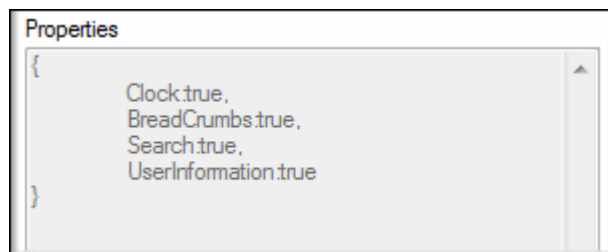

2. The following configuration options are available by right-clicking and accessing the context menu or using the Properties pane options:
 - ▶ Enabling/disabling default Buttons – this can be done by enabling/disabling their Actions

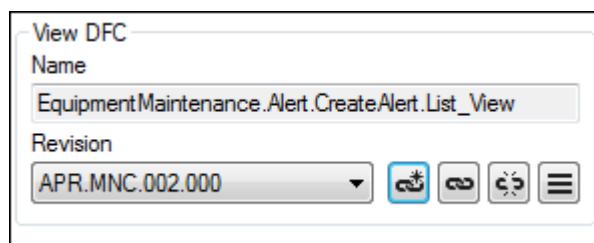

- ▶ Adding new custom Actions – this can be done by adding Actions on the View

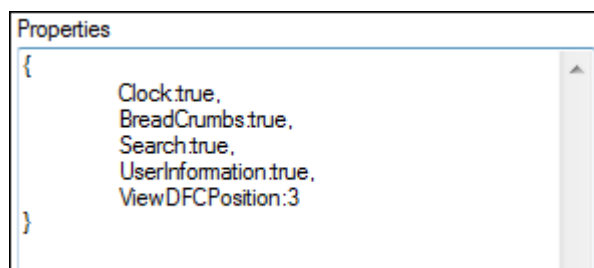

- ▶ Hiding specific parts of the Header (breadcrumbs, the clock, the search field, and user information) – to do this, use the JSON code on the **Advanced Tab** of the View Properties pane

- ▶ Adding an Additional Information – this can be done by linking the Header View DFC. Use **View: General Tab**.

- ▶ Changing the position of a specific part of the Header by modifying the JSON code.

The result can be the following:
