

Import and Export Literals for Translation

This functionality lets you:

- ▶ Export literals from processes, operations, and DFCs to an XML file, which you can translate with the DELMIA Apriso Translation Tool.
- ▶ Import translated literals back to Process Builder.

To Export Literals for Translation

1. In Entity Manager or Project Entity Manager, select the required entity.
2. From the **right-click menu** or **Tools** menu, select **Export Literals for Translation**. A dialog window appears:

For processes and operations linked to a project, the export option is available only from the **Tools** menu.

Export Literals for Translation

Source Language: English Target Language: English

Comment:

Entities:

Type	Name	Revision
DFC	NTC.Activate	APR.NTC.002.000

☒ Export only UI elements

OK Cancel Help

3. From the lists, select the source and target languages.
4. Add a comment, if required.
5. In the case of DFCs, selecting the **Export only UI elements** check box ensures that only the elements that are visible in runtime are exported.
6. A standard **Save As** dialog box appears. Choose the location of the XML file and save.
7. You can open the saved XML file with the DELMIA Apriso Translation Tool.

To Import Translated Literals from an XML File

1. From the **Tools** menu, select **Import translated literals**. A standard **Open** dialog window appears.
2. Navigate to the XML file that you want to open, select it and click **Open**.

In the case of DFCs, importing translated literals from an XML file automatically selects the **Has Changes** check box in the column of the **Entity Manager** or **Project Entity Manager**. To apply the

translations after importing them, you need to regenerate the DFCs. The entities that are ready to be compiled have the **Has Changes** check box selected.
