

Layout Conversions

A Layout is a part of a Screen that defines its graphic design. Different Screens can use the same Layout revision. You can change a Layout by adding and removing Panels, changing the Layout properties, etc. To make it possible, you need different Layout conversions. For more information, refer to the **Embedded Layout** and **Layout Conversions** sections in *Process Builder Projects Guide*.

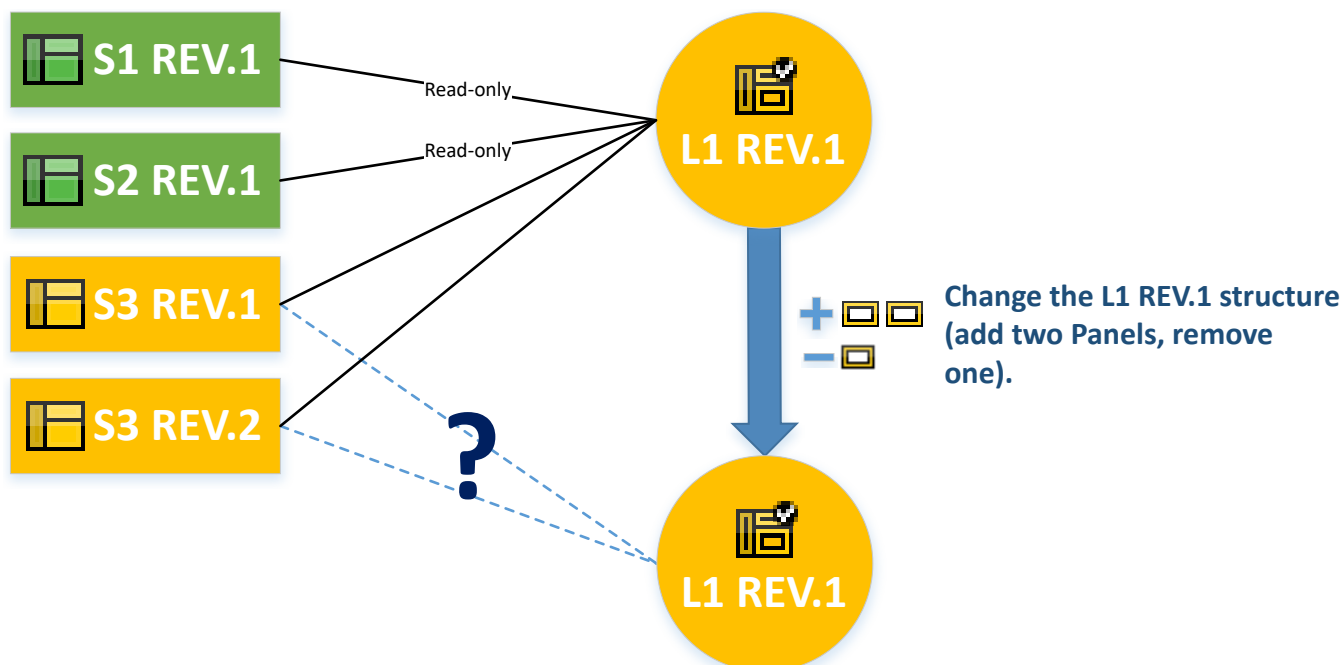

You might need the Layout conversion in the following scenarios:

- ▶ Modifying the linked Layout structure ([Scenario 1](#))
- ▶ Linking Screens to a different Layout ([Scenario 2](#))
- ▶ Setting the default revision of a Layout to a different Layout revision ([Scenario 3](#))
- ▶ Duplicating the Project that contains a Screen with a linked Layout ([Scenario 4](#))

Here is the **basic configuration** where the Layout is dynamically linked to all Screens:

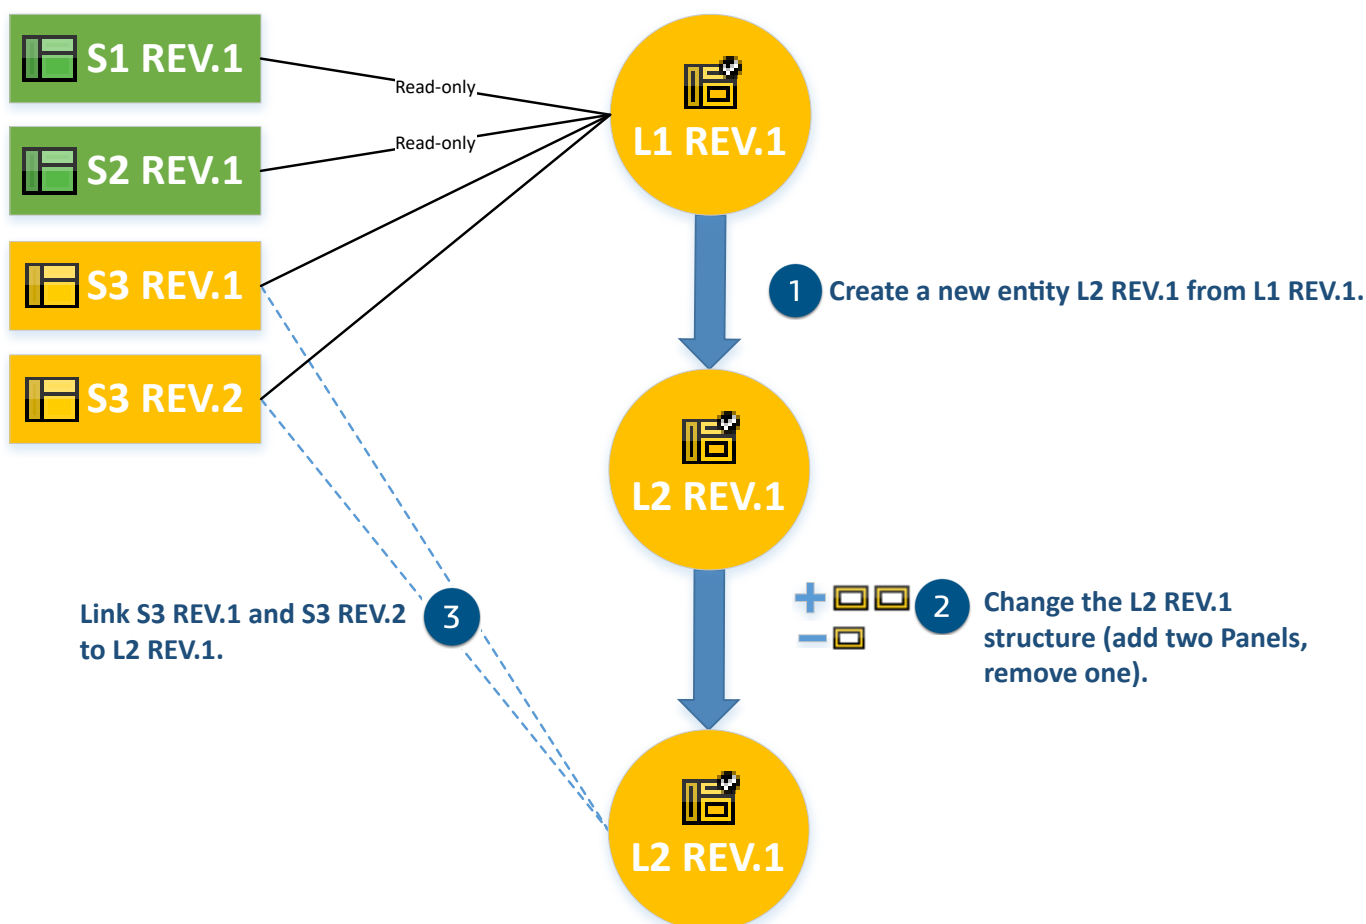

Scenario 1: Modifying the linked Layout structure

After making the changes presented in the diagram, you need to make a decision about the Layout conversion. For more information, see [here](#).

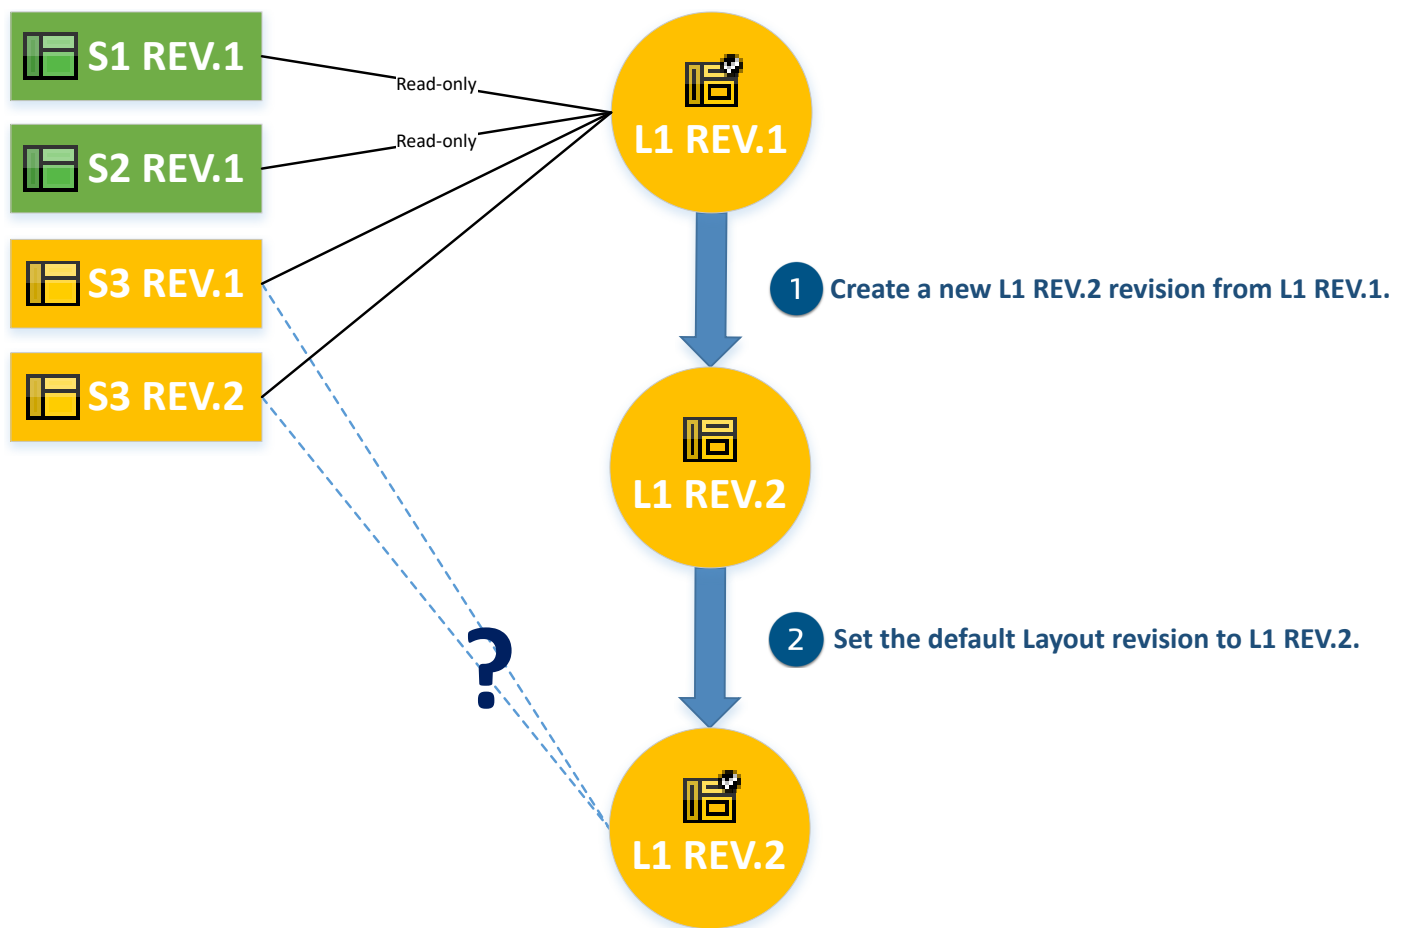

Scenario 2: Linking Screens to a new Layout

After making the changes presented in the diagram, you need to make a decision about the Layout Panel conversion. For more information, see [here](#).

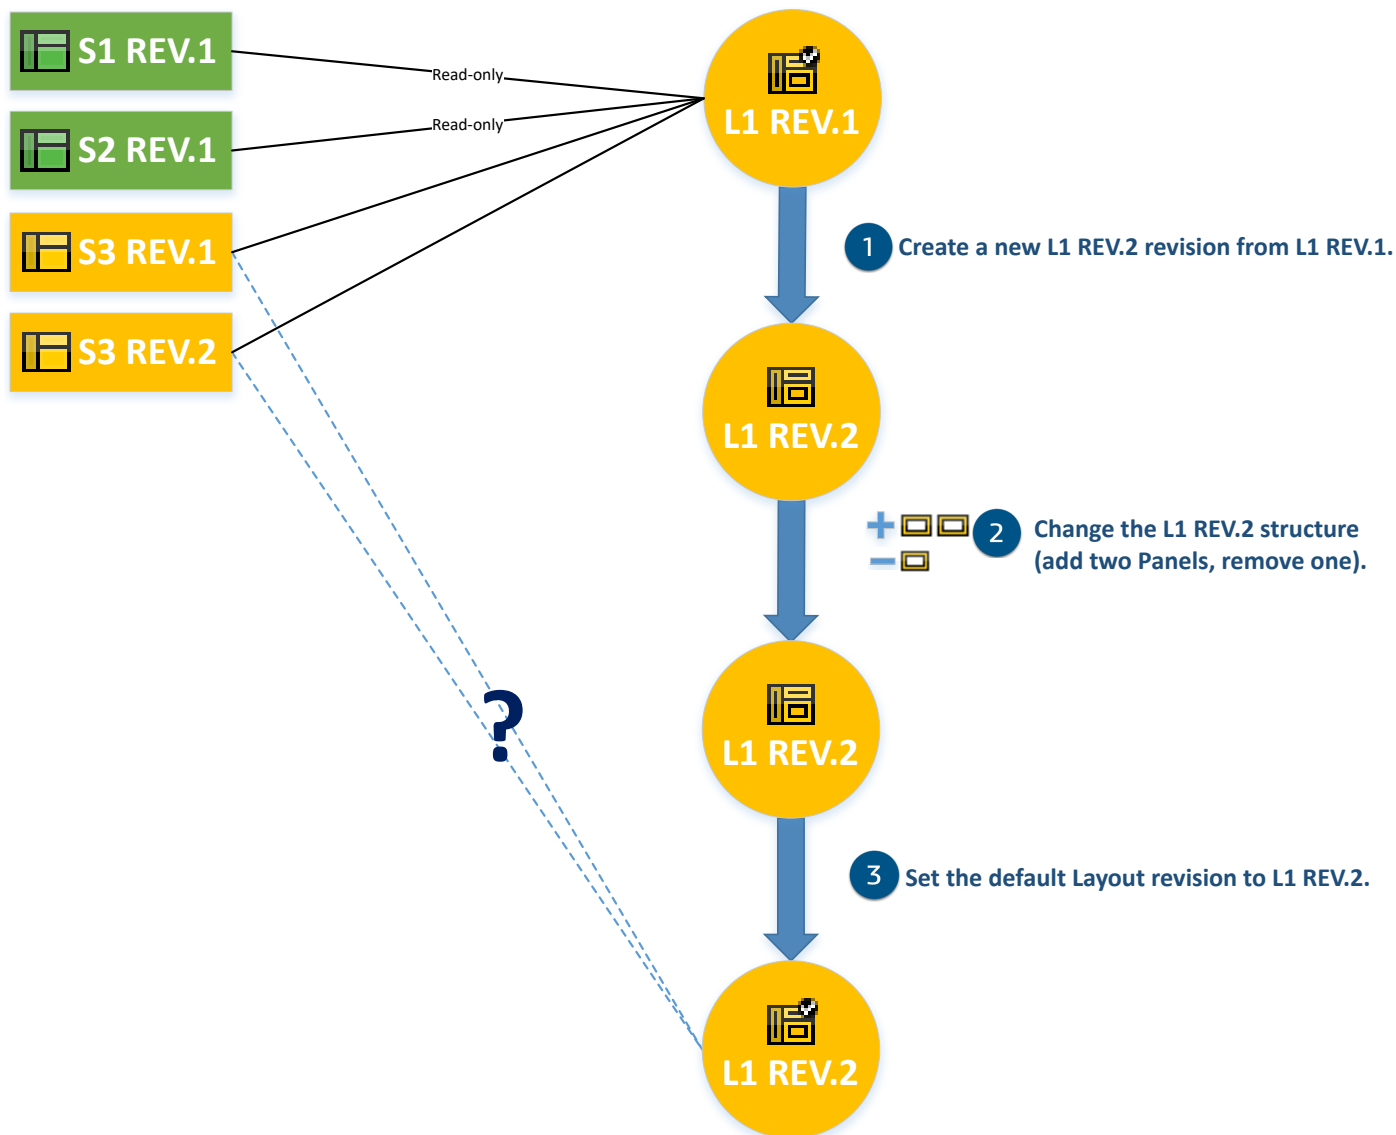

Scenario 3: Changing the default Layout revision

Scenario 3a: Changing the default Layout revision

After making the changes presented in the diagram, you need to make a decision about the Layout conversion. For more information, see [here](#).

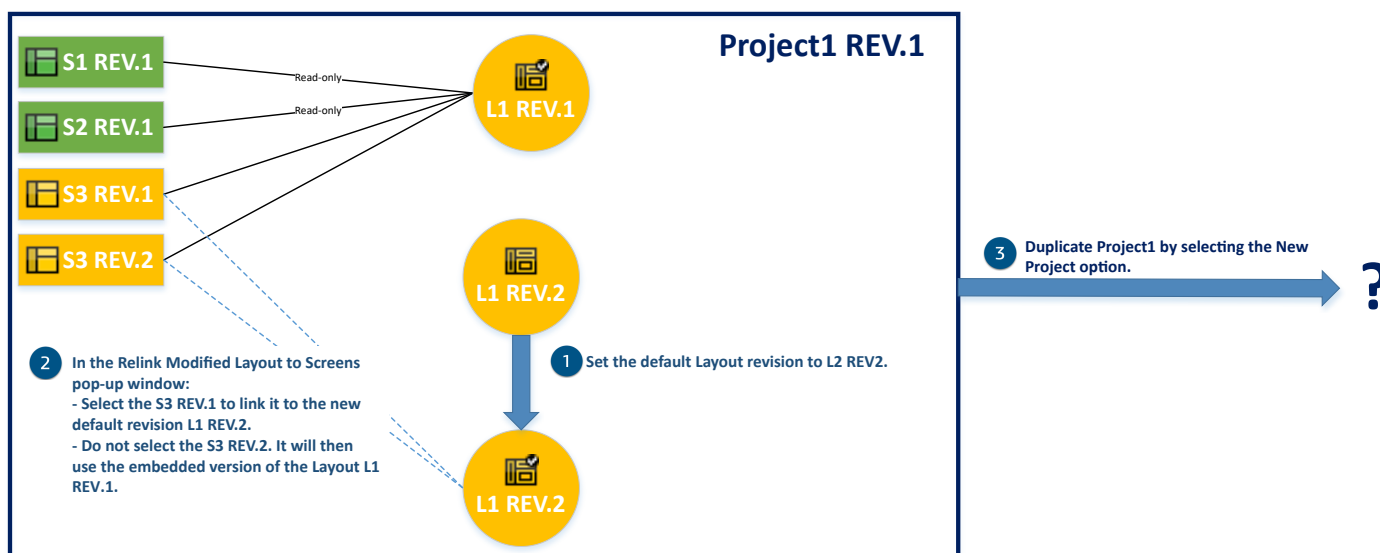

Scenario 3b: Modifying the Layout structure and changing the default Layout revision

After making the changes presented in the diagram, you need to make a decision about the Layout conversion. For more information, see [here](#).

Scenario 4: Duplicating the Project that contains a Screen with a linked Layout

For more information on Project duplication, see [Duplicate a Project](#).

After making the changes presented in the diagram, you need to make a decision about the Layout conversion while duplicating the Project1 REV.1. For more information, see [here](#).

Known Issues

Layouts are not relinked when you change a default revision in the **Project Compare** tab.
