

Manage Functions

Add a New Function to the Step

Use one of the following options:

- ▶ Drag-and-drop a Function type from the Toolbox (see [Available Elements in Function Navigation](#)) in the diagram or the Entity Explorer, or double-click the Function icon in the Toolbox
- ▶ Double-click a Function type from the Toolbox (see [Available Elements in Function Navigation](#))
- ▶ Right-click on the diagram to reveal the right-click menu and choose **Add Function** (the only default Function type)
- ▶ Select **Functions** in the Main Menu and then the Function type of your choice
- ▶ Right-click a Step in the Entity Explorer to reveal the right-click menu and choose **Add Function** (the only default Function type)

The System adds a new Function in the Function Navigation diagram workspace with a default name that can be optionally modified. If there are two functions of the same type in one Step, the system generates the name for the Function using the Function type and number (e.g., Input to Output, Input to Output1).

For Functions related to other entities (Stored Procedure, Business Components, DFCs, DAL methods), the system displays a Suggestion Lookup to search for a proper entity when a function is added.

Select a Function

Use one of the following options in the Entity Explorer or in the Function Designer:

- ▶ To select a single item, click or use the cursor keys
- ▶ To select multiple items, click and hold the Ctrl key
- ▶ To select a range of items, click and hold the Shift key

Rename a Function

1. [Select the Function](#) to be renamed.
2. Use one of the following options:
 - ▷ Choose **Rename** from the [Right-Click Menu](#)
 - ▷ Select the **Name** field on the General tab in the Properties tool pane
 - ▷ Use the [F2 Keyboard Shortcut](#)
 - ▷ Choose **Edit>Rename** from the [Main Menu](#) (this option works only in the Entity Explorer)
3. Enter the new name.

The name of the Function within a single Step must be unique (Function names are case sensitive).

Copy a Function

It is possible to copy selected Functions within one Step and between Steps (of the same or another DFC).

Copy a Function Using Copy and Paste

1. Select the **Function** to be copied.
2. Use one of the following options:
 - ▷ Choose **Edit > Copy** from the **Main Menu**
 - ▷ Choose **Copy** from the **Right-Click Menu**
 - ▷ Use the **Ctrl+C Keyboard Shortcut**
3. Use one of the following options to paste the **Function**:
 - ▷ Choose **Edit > Paste** from the **Main Menu**
 - ▷ Choose **Paste** from the **Right-Click Menu**
 - ▷ Use the **Ctrl+V Keyboard Shortcut**

These copy and paste options work:

- ▶ On a Step selected in the Entity Explorer
- ▶ On a Step selected in the Step Flow Editor
- ▶ Inside the Function Navigation diagram

Copy a Function Using Drag-and-Drop and Holding Ctrl Key

1. Select the **Function** to be copied.
2. The **Function** (or more than one **Function**) can be copied:
 - ▷ Within the Function Navigation Editor
 - ▷ From Function Navigation to a Step in the Entity Explorer
 - ▷ Between Steps in the Entity Explorer
 - ▷ From the Entity Explorer to a Step within the Step Flow Editor
 - ▷ From Entity Explorer to Function Navigation

After Copying a Function

The system creates copies of **Functions** in the diagram with the original names, adding and then incrementing the number at the end of the name.

The system preserves all **Function** properties except invalid pointers to **Outputs** from previous **Functions**.

The user is able to change the order of **Functions** in the Entity Explorer (inside one Step) by dragging a **Function** and dropping it between other **Functions**.

Move a Function

It is possible to move selected **Functions** between Steps of the same or another DFC.

Move a Function Using Cut and Paste

1. Select the **Function** to be moved.
2. Use one of the following options:
 - ▷ Choose **Edit > Cut** from the **Main Menu**
 - ▷ Choose **Cut** from the **Right-Click Menu**
 - ▷ Use the **Ctrl+X Keyboard Shortcut**
3. Use one of the following options to paste the **Function**:
 - a. Choose **Edit > Paste** from the **Main Menu**
 - b. Choose **Paste** from the **Right-Click Menu**
 - c. Use the **Ctrl+V Keyboard Shortcut**

These cut and paste options work:

- ▶ On a Step selected in the Entity Explorer
- ▶ On a Step selected in the Step Flow Editor
- ▶ Inside the Function Navigation diagram

Move a Function Using Drag-and-Drop

1. Select the Function you want to move.
2. A Function (or more than one Function) can be moved:
 - ▶ From the Function Navigation diagram to another Step in the Entity Explorer
 - ▶ Between Steps in the Entity Explorer
 - ▶ From the Entity Explorer to a Step within Step Flow Editor
 - ▶ From the Entity Explorer to Function Navigation

After Moving a Function

The system preserves all Function properties except invalid pointers to Outputs from previous Functions.

If the user pastes the Function with the name as it exists in the Step, the system will rename the Function by adding and then incrementing a number at the end of the name.

The user is able to change the order of Functions in the Entity Explorer (inside one Step) by dragging a Function and dropping it between other Functions.

Remove a Function

1. Select the Function to be removed.
2. Use one of the following options:
 - ▶ Choose **Edit > Delete** from the Main Menu
 - ▶ Choose **Edit > Cut** from the Main Menu
 - ▶ Choose **Delete** or **Cut** from the Right-Click Menu
 - ▶ Use the `Del` Keyboard Shortcut

The system removes the selected Functions from the diagram. Broken Input-Output dependencies from the Functions that remain in the Step are removed. Incoming and outgoing connector lines for these Functions are removed as well.
