

Modify the Process or Operation Code

To Modify the Process Code

The functionalities related to process authoring are deprecated and will not be further developed.

1. Launch [Entity Manager](#).
2. Select the Process that you would like to modify the internal name of from the available list.
3. Use one of the following options:
 - ▷ Choose **Properties** from the [Right-Click Menu](#)
 - ▷ Use the [Shift+F4](#) [Keyboard Shortcut](#)
4. Click the **Edit...** button next to the **Process code** field. This will display a dialog box used for editing the code.
5. Enter the new name in the field provided in the dialog box. Click **OK**.
6. Click **OK** again on the main **Properties** screen to confirm the change.

To Modify the Operation Code

1. [Duplicate](#) the selected Operation to a new entity.
2. Choose a new name and fill in the **Entity name** field.
3. Change the original Operation status to Cancelled.

Operation Codes must be unique across Entity Manager or a single [Project](#). The Codes are case-sensitive and cannot start or end with a space character.
