

Open/Save/Close an Entity

To Open an Entity

- Use one of the following methods to launch the **Open entity** pop-up window:
 - ▶ Select the **Open...** option from the **Main Menu**
 - ▶ Click  (Open) on the **Toolbar**
 - ▶ Use the **Ctrl+O** keyboard shortcut
- Start typing the name of the Entity or a part of it. Note that periods and underscores can be omitted in the search.
- Select the Entity and click **Open** or use double-click.

When you open an entity that is checked out by another user, the system will only allow you to view it in read-only mode.

The **Entity Manager (Managers > Entity Manager)** can also be used to open an existing document and offers more functions than the Open dialog box (e.g., filtering, sorting).

To Save an Entity

Use one of the following options:

- ▶ Select the **Save** option from the **Main Menu**
- ▶ Click  (Save) on the **Toolbar**
- ▶ Use the **Ctrl+S** keyboard shortcut

An action comment may have to be entered when saving a process or operation. This feature is related to [electronic signatures](#) and can be enabled using the `ShowNoteOnSave` key located in the `ProcessBuilder` section of the Central Configuration file (for details, see [Central Configuration Documentation](#)). Action comments should describe the changes made to the entity since the last save. The history of action comments is visible in the [History](#) tab of entity properties.

To Close an Entity

Use one of the following methods:

- ▶ Click  (Close) on the [Toolbar](#)
- ▶ Choose **Window > Close**
- ▶ Click the **X** in the upper-right corner of the entity tab
- ▶ Use the `Ctrl+W` or `Ctrl+F4` shortcuts

If changes were made to the entity, a dialog box with a saving confirmation will be displayed.
