☒ Show WIP Content Class Description
Add Next Order Relation
Add Previous Order Relation
Add New Operation
Link Operation
Copy and Link Operation
Copy from Template Operation
Paste Operation...
Print diagram...
Save diagram as image...

Command	Description
Auto Layout	Automatically rearranges the diagram in the most readable form. This option is available also for processes in the active status .
Show Reason Code Description	If selected, specified reason codes are visible on the connector lines. Valid reason codes are defined with the reason types: Hold (7), Scrap (13), and Rework (17). 
Show WIP Content Class Description	If selected, specified WIP content classes are visible on the connector lines. Valid WIP content classes include: Good , Failed , Scrapped , and Alternative . 
Add Next Order Relation	Next order relation is part of the cross-order navigation . Enables the movement of quantities from a parent order to a child order with a properly defined level.
Add Previous Order Relation	Previous order relation is part of the cross-order navigation . Enables the movement of quantities from an existing parent order of a defined level to a child order.
Add New Operation	Adds a new process operation to the navigation diagram.
Link Operation	Links an operation available in Entity Manager. It is possible to choose an operation from the list.

	When the process and linked operation are within a PB project, and you change the default revision of the operation, the revision will not be determined dynamically at runtime.
Copy and Link Operation	Copies an operation available in Entity Manager and links it to the navigation diagram.
Copy from Template Operation	Copies an operation available in Entity Manager and adds it to the navigation diagram as a process operation.
Paste Operation	Pastes a copied process operation. You can change its name and sequence number. A process operation is pasted from the database in the state of the moment of pasting.
Print diagram	Displays a printing window and lets you print an entire operation navigation diagram that is being viewed.
Save diagram as image	Saves an entire operation navigation diagram to a file. This option is available also for processes in the active status.

Operation

In Place Replace
Publish Process Operation as Operation
Copy Operation
Remove
Change Picture

Command	Description
In Place Replace	Replaces an existing operation linked to a process with another one.
Publish Process Operation as Operation	Extracts the process operation as a stand-alone operation and makes it available in Entity Manager. In the displayed pop-up window, you can save the operation with a new name and revision.
Copy Operation	Copies the selected process operation from a process.
Remove	Removes the selected operation.

Change Picture	This option is available only when the operation navigation is displayed in the PERT view . Lets you add, replace, or remove an image in the upper-right corner of the operation model. The image illustrates the operation type and you can edit it by inserting the picture name in the displayed pop-up window.
