

Pop-up Window

It is possible to display a View as a pop-up window. Any View can be displayed as a pop-up window (including a Form View).

Only one level of pop-up window is supported (you cannot open a second pop-up from this pop-up).

To display a View in a pop-up window, link the pop-up window on the Action **Properties** pane:

Some View Actions behave differently when the View is displayed as a pop-up window:

- ▶ TargetScreen – [Back](#) (will close the pop-up window instead of going to the previous Screen)
- ▶ TargetScreen – [Pop-up close \(refresh screen\)](#) (will close the pop-up window and refresh the Screen)

Pop-Up Window Conditional Display

If the pop-up window should be displayed based on a calculation, you can use the [Action Chaining](#) scenario.

For example, the Button that should display the pop-up window conditionally should be linked to the [On Action DFC](#), which returns the next Action, which equals the pop-up display Action (if the pop-up is to be displayed).
