

Remove a User Control

To Remove a User Control

1. Select the User Control to be removed.
2. Use one of the following options:
 - ▷ Choose **Edit > Delete** from the [Main Menu](#)
 - ▷ Choose **Edit > Cut** from the [Main Menu](#)
 - ▷ Choose **Delete** or **Cut** from the [Right-Click Menu](#)
 - ▷ Use the [Del](#) [Keyboard Shortcut](#)

The System removes grids together with their contents.

Removing User Controls means that Business Control Functions are removed as well and related Inputs and Outputs will be affected. Inputs and Outputs that have been automatically created and not manually modified will be removed. In other cases, the Input source is changed to constant or the Output routing will be removed.

Removing a Sub-DFC from Layout Editor means that it is removed from the Step.
