

Rename Action Script References

If the names of any Action Script Functions have been changed, you can update their references in Screen Flow entities using the **Rename Action Script References** wizard:

1. Select **Tools > Rename Action Script References** from the [Main Menu](#) to launch the wizard.

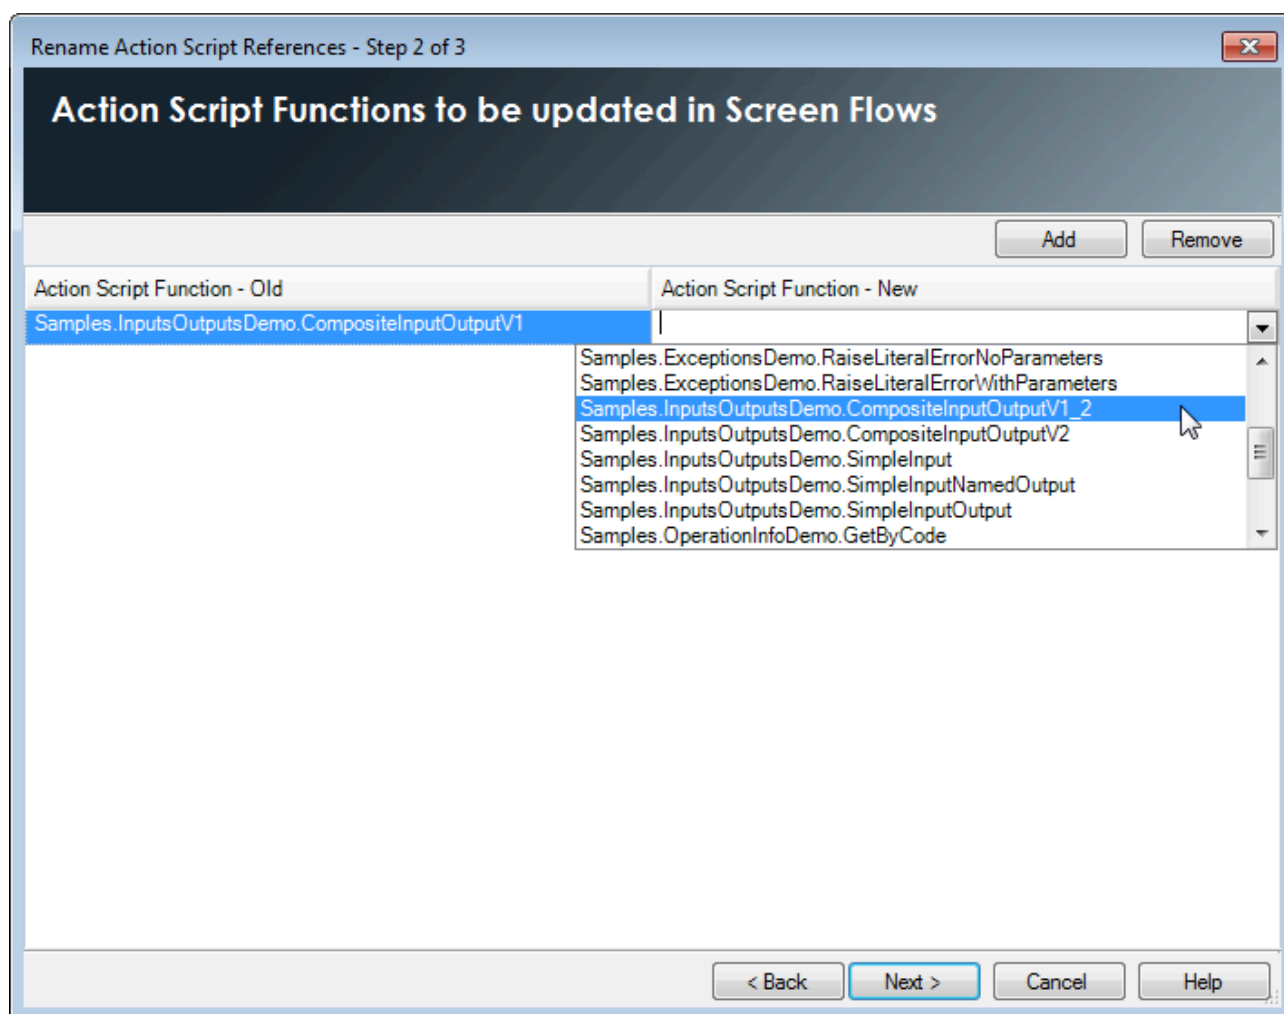

You will also be asked if you want to launch the wizard when saving changes in an Action Script if any of its functions have been renamed.

2. Select **Automatically detect instances of invalid usage in Screen Flow entities** if you want the wizard to detect any invalid references or **Manually provide Action Script Functions to update** if you prefer to choose the Action Script Functions to be refactored yourself. Click **Next**.
 - ▶ If you have selected the first option, the wizard will detect all Action Script Functions whose names have been changed and list their old names in the next screen
 - ▶ If you have selected the second option, the list in the next screen will be empty
3. Specify which Action Script Functions need to have their references updated. If the list has been populated automatically, you need only select the new function name(s) from the drop-down list in the right column. Otherwise, click **Add** to insert a new row. Select the old name of an Action Script Function from the drop-down list in the column on the left and

select its new name from the drop-down list in the right column. You can also delete items from the list by clicking **Remove**.

Once you have provided all Action Script Functions to be updated, click **Next**.

4. In the next screen, the wizard will list all entities where Action Script Function references need to be updated, as well as any entities where this will not be possible (see the note below). Click **Finish** to complete the process.

Action Script Function references can only be updated in Screens and Views which **are not** Active or Cancelled.

Rename Action Script References - Step 3 of 3
