

Screen Action

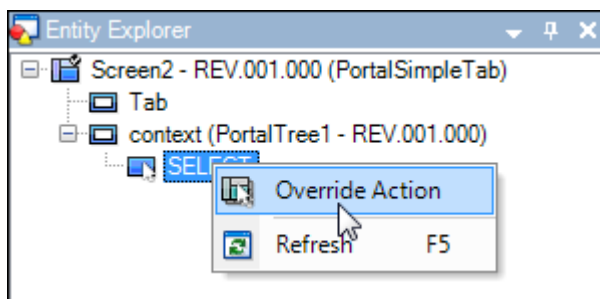

Screen Actions behave the same way as [View Actions](#).

Once a View is linked to Screen Panel, its Actions are shown on the Screen Entity Explorer pane.

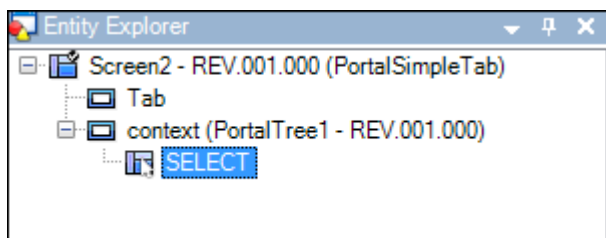

Additionally those [View Actions](#) can be:

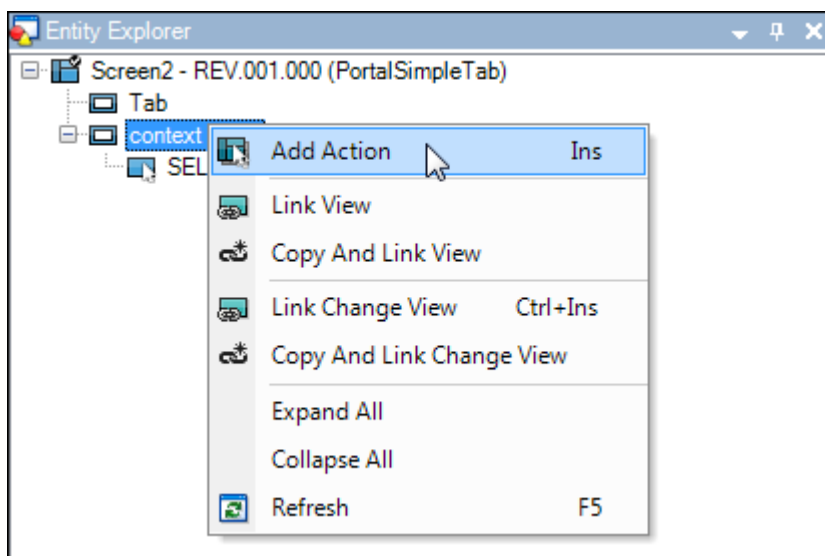

- Overridden on the Screen (the Action then becomes a local Action for the specific Screen with modified properties)

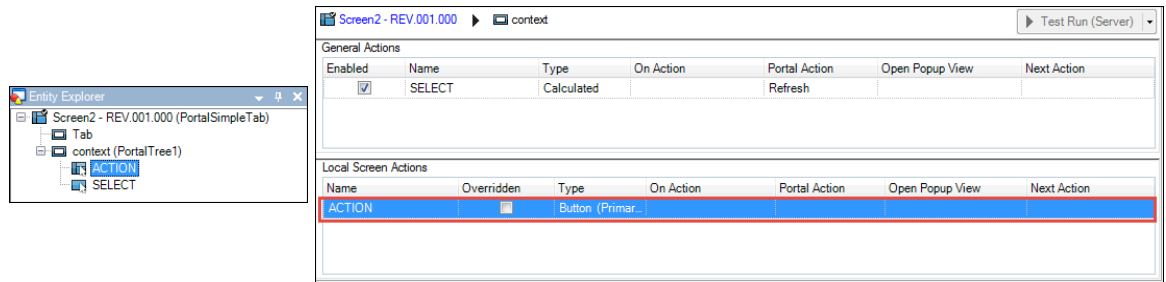

- After overriding the Action, the icon changes:

- Extended with additional local Actions:

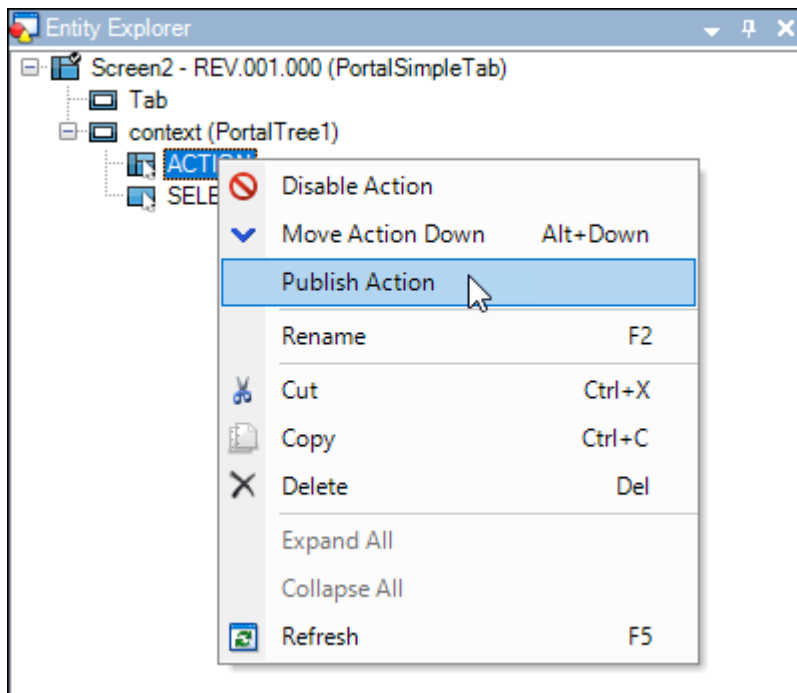

- A new Action has been added to a View:

Extended Actions on the Screen have an additional property: [Change View](#).

- The local Action can be published in order to become a General Action and to be available for other Screens (the Action can be published only for editable Views)

The local Action is now a General Action:
