

Screen Best Practices

Naming Conventions

Screens

A screen name must be unique and explicit enough to make its search easier. The Screen name format is **YYYXX**, wherein:

- ▶ **YYY** is the screen family code
 - ▷ This part of the Screen name should be shared within the same “family” of Screens
 - ▶ A family of Screens is a set that addresses the same business requirements or that belongs to the same functional area, even if the Screens belonging to another Screen family can be accessible elsewhere (e.g., the QMS Screen used for quality data collection can navigate to the SPC screens used for SPC data visualization)
 - ▷ The **Base Screen** will only use **YYY** as the name
- ▶ **XXX** is a numeric value
 - ▷ This is the first screen in the family, or it is the one after the Base Screen
 - ▶ The subsequent Screen numbers should be: 010, 020, 030, 040, etc.

These subsequent Screens should not be numbered 01, 02, 03, 04, etc., because it is important to maintain the possibility of adding additional Screens if necessary in the future.

- ▷ **XXX** is not needed for the Base Screen

Examples

- ▶ **NRG** – the Base Screen for Energy Monitoring, which has a grid for selecting the machines to monitor
 - ▷ The machine list is passed as an Input to the following screens: NRG010, NRG020
- ▶ Other examples:
 - ▷ SPC
 - ▷ SPC010
 - ▷ MNT010
