

Screen: Change Flow Tab

Change Flow is used to modify the Screen Flow behavior by defining Actions that might be triggered before the Screen load. The trigger comes with the value of the Output ACTION, which is set in [On Initialize DFC](#) and [On Load DFC](#). It enables displaying pop-ups and handles the Screen routing before entering the Screen.

In the example below, if the On Initialize DFC sets the Action External Output to:

- ▶ **CLOCK**, then the PortalClock_example Screen will be displayed instead of the current one
- ▶ **TREE**, then the PortalTree View will be displayed instead of the current Screen

The following actions are available at the top of the pane:

- ▶ Clicking (Add) adds an Action
- ▶ Clicking (Remove) removes the Action

The table at the top of the pane presents the following information:

Column Name	Description
Enabled	If selected, the Action is enabled.
Name	The name of the Action.
Open Pop-up View	The View that will be displayed in a pop-up window.
Portal Action	The target Screen that will be opened.

Individual Actions can be edited in the following fields at the bottom of the pane:

Field	Description
Action Name	The name of the Action.
Open Pop-up View	▶ Name – the name of the pop-up View being linked ▶ Revision – the revision of the pop-up View; the following actions are available: ▶  – invokes the Views window, where a pop-up View can be copied and linked ▶  – invokes the Views window, where a pop-up View can be linked. If there is more than one revision of that View, a pop-up listing all of the revisions will appear (to open one of the revisions, double-click it). ▶  – unlinks the linked View ▶  – invokes the View workspace screen (for details, see View Overview). In the case of PB Projects, the pop-up displays default revisions of Views in the current Project.
Portal Action – Go to Screen	▶ Name – the name of the Screen being linked ▶ Revision – the revision of the linked Screen; the following actions are available: ▶  – invokes the Screens window, where a Screen can be linked. If there is more than one revision of that Screen, a pop-up listing all of the revisions will appear (to open one of the revisions, double-click it). ▶  – unlinks the linked Screen ▶  – invokes the workspace of the linked Screen In the case of PB Projects, the pop-up displays default revisions of Screens in the current Project.
