☒	AlertID	ListOfChar			☐		☒
☒	AlertClass	Integer			☐		☒
☒	AlertStatus	Integer			☐		☒
☒	AssignedTo	Integer			☐		☒
☒	Comment	Char			☐		☐
☒	ExistingMes	Char			☐		☐
☒	MachinelD	Integer			☐		☐
☒	Message	Char			☐		☐
☒	Priority	Integer			☐		☐
☒	ReasonCod	Char			☐		☐

The Parameters tab lists all the parameters defined for entities linked to the Screen:

- ▶ External Inputs defined for an DFC linked to the Screen (On Load, On Initialize, and On Action) or a View (View DFC). For more information, see [DFC Interface Tab](#)
- ▶ Fields defined for a View type of Form linked to a Screen. For more information, see [Forms](#)
- ▶ Action Script functions linked to the Screen (On Load, On Initialize, and On Action)

All the External Inputs defined and the fields from Forms used within the Screen can be displayed here and initialized accordingly when opening the Screen. The Inputs will be visible on the list after the refresh. To refresh the list of Inputs, click (Update). By default the list is empty (not updated). You can also open a DFC where the selected Input is used by clicking (Properties).

Column Name	Description
Enabled	If selected, the Input will be initialized (forced) with the provided value.
InputName	The External Input name (this is a read-only field).
Type	The External Input type (this is a read-only field).
Value	The value that will be passed to the Input.
MapInput	The existing Input from the current session will be passed to the value.
Override	If selected, the value will be overridden every time the Screen is reloaded.
SystemParameter	The existing System Parameter will be passed to the value.
External	If selected, the parameter value will be configurable in the FlexPart Configuration M&M screen , when a FlexPart is created using the given Screen.

When the parameter is of the Complex/List of Complex data type, the entire parameter row becomes uneditable.

Provide a value in only one of these fields: Value, MapInput, or SystemParameter.
