

Conditionals

Conditionals can be added in HTML tab between or inside HTML tags.

```
{?[condition]?[content if true]:[content if false]?}
```

The condition defines which content should be displayed. The content can range from simple text to HTML code.

Inputs	HTML Layout Editor/HTML Editor	Runtime
► DFC Function Navigation:  ► HTML View: 	 HTML code	

It is possible to embed more complicated HTML within the displayed result, see advanced examples below.

Conditional statements cannot be nested.

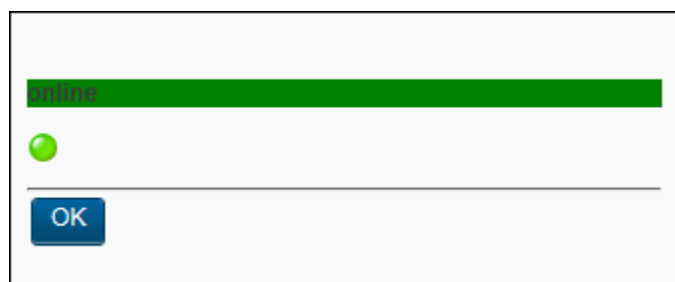

Conditionals cannot be used with the Complex data type.

Advanced Examples

Conditionals can be used inside HTML attributes.

```
<p style="background-color:{?Status=='online'?green:red?}"><b>{?Status=='online'?online:offline?}</b></p>
```

```
{?Status=='online'?<div></div>:<div></div>?}
```

Below are other examples of using conditionals inside HTML attributes:

```
<div class="{?Input1=== 'AAA'?red:green?}"></div>
```

```
<input value="{?Input1=== 'AAA'?red:green?}" />
```

Conditionals cannot be used inside the [Attribute](#) tag.
