

Status Bar

The status bar offers the following information and functionalities:

Field	Description
Server Connection Status	Indicates whether you are (Connected To) or (Disconnected From) a server. When connected, the server name and your login name will be displayed.
Sign off Status	Indicates whether an electronic signature is required when working with processes, operations, and DFCs. For details, refer to 21-CFR-Part-11 Compliance Guide .
Design Mode Status	Indicates whether the editing of entities is allowed. If the design mode is disabled, you cannot modify any entities. This can be set in the Central Configuration file, or when the entity is transferred between DELMIA Apriso servers.
Editability Indicator	Indicates whether an entity is (Editable) or (Read-only). The factors that influence this indicator are: ▶ Entity status – entities are read-only in the active status. ▶ Entity view – entities are read-only in Test Run. ▶ Design mode status – if the design mode is disabled in the Central Configuration file, entities are read-only.
Selected Entities Count	Displays the number of selected items and the total number of filtered entities.
Entity Status	Indicates the status of the entity that is being edited. Right-click this part of the status bar to change the status of an entity.
Zoom	Indicates the current level of zoom at which the designer view is set. Right-click this part of the status bar to use pre-set zoom percentages. This feature is disabled in the Test Run.

The status bar also displays information about installing updates and loading data.
