

Step 2: Link Views to a Screen

To Link a View to a Screen

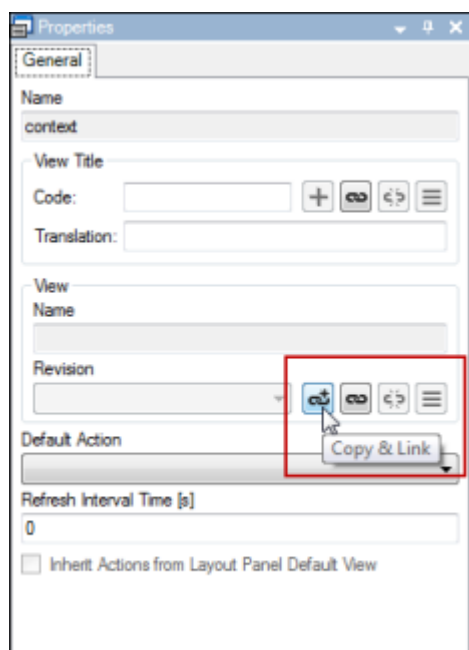

1. Link a View by using one of the following options:

- ▶ Click  (Copy And Link View) on the Screen workspace (recommended).

When using the **Copy And Link View** functionality, the copy of the View and its linked DFC is created automatically.

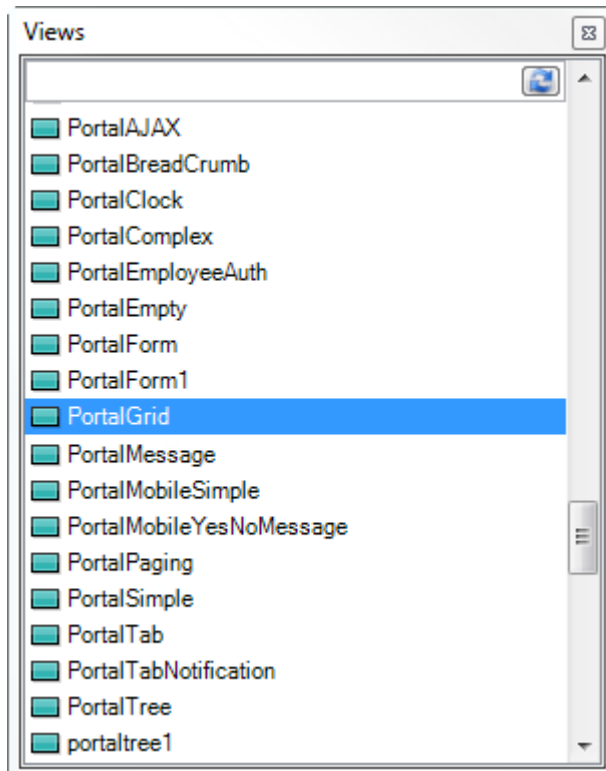

- ▶ Click  (Copy & Link) on the **General Tab** of the Panel **Properties** pane.

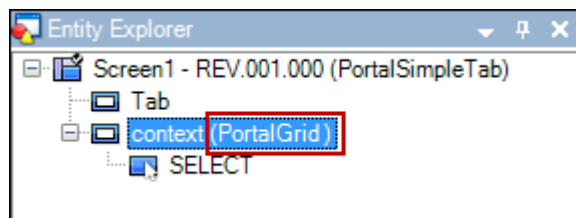

2. Choose the View to link from the **Views** pop-up window.

Using predefined Templates is recommended (for details, see [View Templates](#)).

The basic configuration of the screen is now done. After the View is linked it is not added as a new entity itself in Entity Explorer, because only Panels are added under the Screen. However, the name of the linked View is added to the name of the Panel, as in this example:

For more information on Views, see [View Overview](#).
