

# Stored Procedure Function

The Stored Procedure Function enables executing a Stored Procedure against a configured database.

## To Add the Stored Procedure Function

1. Drag the Stored Procedure Function from the **Toolbox** to the Function Navigation diagram, or double-click the Stored Procedure icon in the Toolbox.
2. The system displays a complete list of Stored Procedures that the user may choose from. When the user enters a part of the Stored Procedure name, the system suggests a list of matching entries from the database.

3. After selecting a Stored Procedure, the system adds Inputs and Outputs to the Function based on the Inputs and Outputs of the Stored Procedure.
