

Tool Panes

Some tool panes may not be available in a particular view, especially in the Entity Manager view.

The following tool panes provide you with additional functionalities while working with an entity:

- ▶ **Entity Explorer** – displays and allows you to navigate through the tree structure of an entity.
- ▶ **Session Variables** – displays all available session variables that you can use in DFCs.
- ▶ **System Parameters** – shows all system parameters along with the categories that they belong to.
- ▶ **Validation Messages** – displays the results of an entity's validation.
- ▶ **Rich Text Description** – displays a window with an extended description of a process, operation, DFC, step, screen, layout, and view.
- ▶ **Categories** – organizes processes, operations, DFCs, screens, layouts, and views in categories.
- ▶ **Preview** – gives the ability to preview the screen created in the HTML, Java Script, and CSS tabs within the DFC step.
- ▶ **Change Orders** – contains the list of change orders that affect a process or operation.
- ▶ **Action Script Output** – allows you to test and debug [action scripts](#).
- ▶ **Background Tasks** – displays the progress of various background tasks.
- ▶ **Recent and Favorite Items** – displays a list of recently accessed entities and favorites.
- ▶ **Toolbox** – facilitates the adding and linking of entity elements.
- ▶ **Unit Test Explorer** – allows you to run unit tests for a DFC included in a project.
- ▶ **Properties** – displays and allows you to edit the properties of an edited entity.
- ▶ **Advanced Find** – allows you to find entities using keywords.
