

View Overview

A View is a user interface element that is displayed inside the Panels on a Screen and is used to collect or display information from the user.

A View can contain the actual View, an DFC of the View subtype, and Business Controls.

The available View types are:

- ▶ Header
- ▶ Form
- ▶ General
 - ▷ Grid View Template
 - ▷ Tree View Template
 - ▷ Visualization View Template
 - ▷ Tab View Template

Creating a View

Copying and pasting [Views Templates](#) instead of creating them from scratch is recommended.

A View can be linked to a Screen in the following ways:

- ▶ Directly to a [Panel](#)
 - ▷ A View linked to a Panel on a Screen can be refreshed asynchronously by a given time interval (for details, see [AJAX View Template](#)).
- ▶ As a [Change View](#)
- ▶ As a [Pop-up Window](#) (via an [Action](#))
