

View Workspace: Actions Tab

The **Actions** tab in the View workspace lists all the Actions with their Properties defined for the View. The Actions tab is available for all **View Types**.

You can see the configuration settings and also change the arrangement of Actions by using these buttons:

Button	Description
	Adds a new Action.
	Deletes the selected Action.
	Enables/disables the selected Action. This option can be enabled for Views that are in the active status. For details on how to enable it, see "Modifying Properties..." section of the Entity Status Types topic.
	Moves the selected Action up/down on the list (available only if there is at least one Action above/below the selected one). It is also possible to use drag-and-drop to change the sequence of Actions. This option can be enabled for Views that are in the active status. For details on how to enable it, see "Modifying Properties..." section of the Entity Status Types topic.

The following table presents descriptions of the View settings. For additional details, see **View Action: General Tab**.

Column Name	Description
Enabled	If selected, the Action will be displayed in runtime.
Name	The name of the Action.
Type	The Action type determines what triggers the Action: ▶ Button (Primary) ▶ Calculated ▶ Tab ▶ Button (Secondary) ▶ Numeric

On Action	The name of the DFC or Action Script Function that will be executed when the respective Action is triggered and before the target Screen is loaded. For more information, see On Action DFC and Action Scripts Overview .
Portal Action	The Action in the Portal.
Open Popup View	Opens the View in a Pop-up Window .
Next Action	The Action to be used as the Next Action .

You cannot edit any properties in the View workspace, as these are read-only fields.
