

View Workspace: Forms Tab

The **Forms** tab in the View workspace lists all the groups of controls (in the **Groups** section) with their respective controls (in the **Controls** section). You can see the configuration settings and also change the arrangement of controls by using these buttons:

Button	Description
	Adds a new group or control.
	Deletes the selected group or control.
	Copies the selected group or control.
	Cuts the selected group or control.
	Pastes the selected group or control.
	Enables/disables displaying the selected group or control in runtime. The enabled control will be displayed in runtime only if it is assigned to the enabled group.
	Moves the group or control up/down on the list (available only if there is at least one group or control above/below the selected one). It is also possible to use drag-and-drop to change the sequence of groups or controls.

The tables below present descriptions of the View settings. For additional details, see [Form](#).

Groups

Column Name	Description
Enabled	If selected, the group will be displayed in runtime.
Name	The name of the group of controls.
Show Title	If selected, the title (label) of this group will be displayed on the Screen.
State	The initial state of the section (control group).
Style	The style to be rendered on the UI element for this group of controls (usually used for changing the size, etc.).

CSS Class	Additional CSS classes for the selected group of controls.
------------------	--

Controls

Column Name	Description
Enabled	If selected, the control can be displayed in runtime if it is assigned to enabled group.
Code	The unique control code.
Type	The type of control Input (e.g., Text Box, Drop-down List, Time Picker).
Data Type	The data type of the control.
Show Title	The title (label) of the control that will be visible on the Screen.
Required	Adds a validation on the UI to force the user to fill the control. If Required is set to true and the entered value of this control equals the Default Value or it is empty, then an error will be displayed in runtime after the submit. For details, see View Type: Form .
Initial Value	The value that will be displayed in the control after entering the Screen. For details, see View Type: Form .
Span Over	Controls how many columns the control should span. For details, see View Type: Form .
