

Web API Client

You can call API key-protected and access token-protected REST web services (see [Web Services Manager](#)) from the JavaScript tab or the HTML tab (inside a `<script>` tag) using the dedicated **Web API Client**. For a complete list of available objects and functions, see the [API Documentation](#).

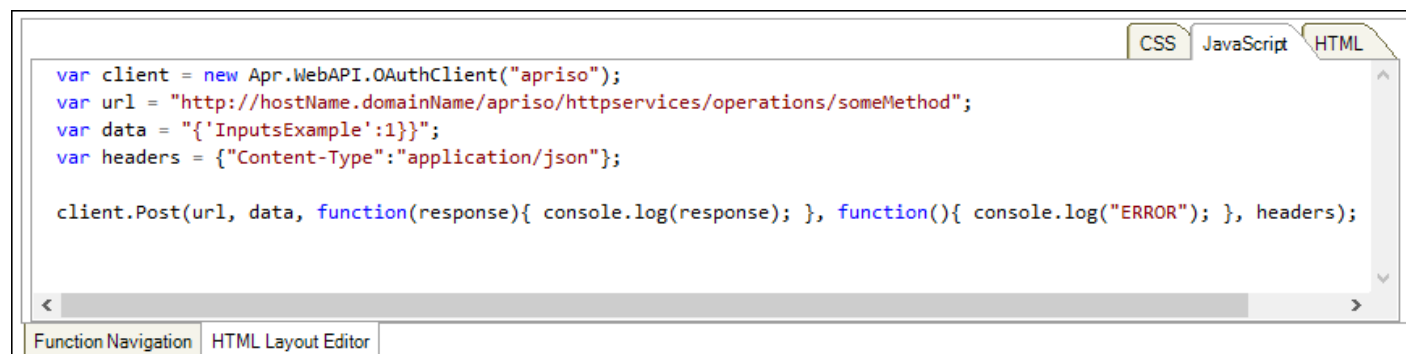

To call an external Web Service using the Web API Client, you must add its provider in `WebServiceProviders.xml`. For more information, see the **Web APIs Guide (Web API Client section)**.

When using the Web API Client inside the **HTML tab**, be careful when using double curly braces ("`{{`" and "`}}`"). The HTML tab treats double curly braces as an escaped single brace. Therefore, make sure to separate any double curly braces, e.g. in a JSON object or string, with a space character. Alternatively, you can use a double curly brace ("`}}`") to represent a single brace ("`}`").

Bad: `{"Inputs":{"Example":1}}`

Good: `{"Inputs":{"Example":1} }`

Good: `{"Inputs":{"Example":1}}`

```
var client = new Apr.WebAPI.OAuthClient("apriso");
var url = "http://hostName.domainName/apriso/htpservices/operations/someMethod";
var data = '{"InputsExample':1}}';
var headers = {"Content-Type":"application/json"};

client.Post(url, data, function(response){ console.log(response); }, function(){ console.log("ERROR"); }, headers);
```

When calling an external provider, a pop-up window with a log-in form may appear. Therefore, make sure that pop-up windows in the browser which displays the DFC are enabled.

The screenshot shows a web browser window titled "DELMIA Apriso Portal - Google Chrome" with the address bar displaying a URL starting with "/Apriso/Portal/Kiosk/Login.aspx?". The page content features the DELMIA Apriso logo on the left and a login form on the right. The login form includes fields for "Name/Badge" and "Password", a "Log In" button, and a "Forgot Password" link. The background of the browser window shows the "Issues Management Cockpit" interface with tabs for "Issues" and "Quality Defects".
